A NOTE TO USERS

MODIFICATIONS:

(1) The monthly and quarterly seasonally adjusted series on "Consumer Credit Outstanding" in Table 90 and Pages S-8 and S-9 have been revised for the entire period from 1952 to date.

The data now presented have been adjusted by the X-11 variant of the United States Bureau of the Census, Method II program.

Back records for the above series on the revised basis are available upon request.

(2) The data on "Exports of Skim Milk Powder" in Table 80 which had been erroneously reported in the previous two editions are amended in this issue. The complete back record is available in the D.B.S. publication "Trade of Canada, Exports" (Catalogue No. 65-004).

(3) The production and stock figures of evaporated milk in Table 81 have been changed. Data for the period not covered by the Review can be obtained from "Dairy Factory Production" (Catalogue No. 32-002) and "Stocks of Dairy and Poultry Products" (Catalogue No. 32-009), D.B.S.

FEATURE ARTICLES:

Reprints of the following articles may be obtained, free of charge, from the Current Business Indicators Section, National Accounts and Balance of Payments Division, D.B.S.

NATIONAL ACCOUNTS, INCOME AND EXPENDITURE THIRD QUARTER 1966

Introductory Review

Gross National Product rose to a seasonally adjusted annual rate of \$57.7 billion in the third quarter of 1966, 3/4 of 1 per cent above the preceding period compared with a revised¹ change of 2 per cent from the first to second quarter. With prices increasing by 1 per cent in the third quarter, production in real terms was virtually unchanged.

With the data now available it is possible to suggest orders of magnitude for the year 1966 as a whole. If, for instance, there were no change other than the normal seasonal increase in the fourth quarter, the advance in Gross National Product from 1965 would be 10.1 per cent. Assuming, for example, a gain of 1 per cent in the fourth quarter, the advance would be 10.4 per cent.

Over-all demand was buoyant in the third quarter. The effect of sharp increases in personal and government spending, as well as in exports, was somewhat dampened by a decline in investment in plant and equipment and new housing. With the value of production increasing only fractionally, partly owing to industrial disputes, the greater part of the \$2.0 billion rise in final demand was met from an increase in imports and from a sharp reduction in the accumulation of business inventories.

The value of personal expenditures on goods and services rose by over 3 per cent, the largest increase in the current expansion in both value and real terms. Approximately one-third of this increase resulted from a 30 per cent gain in spending on new cars, a gain which followed a sharp decline in new automobile purchases in the second quarter. Most of this increase in demand was met by a running down of the large stocks in the hands of motor vehicle dealers. Demand for other goods and services also rose significantly, contributing some \$700 million to the over-all increase of \$1,140 million in consumer spending. About 55 per cent of the \$700 million gain was attributable to expenditures on goods other than motor vehicles, while 45 per cent resulted from increased spending on services, where price increases were more pronounced than in goods.

Government expenditure on goods and services rose by 7 per cent between the second and third quarters with similar increases occurring at all levels of government. At the federal level there was a marked increase in official contributions between the second and third quarters, a large part of which represented wheat shipments to India. This rise in official contributions was reflected in similar increases in the three series, government expenditure, exports and imports.

¹ As a result of the incorporation of the November estimate of the 1966 crop, seasonally adjusted Gross National Product for the first quarter has been revised upwards by \$64 million. This revision has also been included in the changes made to the second quarter.

When this increase in foreign aid is removed from total exports and imports of goods and services, the increases were 2.5 per cent and 3 per cent respectively. The deficit in the external account² widened by about \$100 million at annual rates, with an increase in the deficit on non-merchandise trade partly offset by a rise in the merchandise surplus.

Business investment in plant and equipment declined by 2.5 per cent between the second and third quarters with virtually all of the decrease accounted for by a 5 per cent decline in the value of new non-residential construction. Outlays on new housing also were down significantly by about 8 per cent, following small increases in the preceding two quarters.

In contrast to a \$1.3 billion accumulation in business inventories in the second quarter of 1966, the business sector's stocks increased by \$0.6 billion in the third quarter. Retail and wholesale trades were mainly responsible for this decline in the rate of inventory investment and, as previously mentioned, retail motor vehicle dealers showed a sharp liquidation in stocks.

Turning to the components of income, net national income, increasing at approximately the same rate as Gross National Product, reflected certain interesting and partially offsetting movements among the components. Labour income, profits and other investment income all were adversely affected by third quarter strikes, notably that of the railways. Labour income increased by about 2 per cent, maintaining the same rate of change as in the second quarter, while profits, which had shown little change since the third quarter of 1965, declined by nearly 8 per cent, with the declines widespread among the various industries and particularly in the transportation industry. Other investment income declined by 2 per cent, and net income of both unincorporated business and accrued farm income advanced by nearly 6 per cent.

Price Movements

As previously mentioned, the price component of Gross National Product advanced by 1 per cent in the third quarter, a slightly reduced rate from the rates of the preceding two quarters.

All major components shared in the price rise. The price component of personal expenditure, however, showed only a moderate increase, in contrast to the preceding two quarters. This was partly because of a decline in the rate of increase in food prices, and partly because of smaller increases in non-food goods prices, the latter having been affected in the second quarter by an increase in the Ontario sales tax.

² National Accounts basis.

THE VALUE OF G.N.P. INCREASED BY 0.7 PER CENT IN THE THIRD QUARTER. IN REAL TERMS PRODUCTION SHOWED VIRTUALLY NO CHANGE

SHARP INCREASES IN CONSUMER AND GOVERNMENT SPENDING WERE LARGELY OFFSET BY A PRONOUNCED DECREASE IN THE AMOUNT OF ACCUMULATION IN BUSINESS INVENTORIES COUPLED WITH A DECLINE IN BUSINESS FIXED CAPITAL SPENDING

BUSINESS SPENDING ON MACHINERY SHOWED NO CHANGE, WHILE SPENDING ON PLANT DECLINED BY 5 PER CENT AND NEW HOUSING BY 8 PER CENT

PERSONAL EXPENDITURE ON GOODS AND SERVICES ROSE STRONGLY WITH A SHARP INCREASE IN DURABLE GOODS REINFORCED BY INCREASES IN SPENDING ON NON-DURABLE GOODS AND SERVICES

ALL DATA SEASONALLY ADJUSTED, AT ANNUAL RATES

* NATIONAL ACCOUNTS BASIS

Prices of women's and children's clothing and footwear all increased by about 1 per cent, while prices of new automobiles declined by about one-half of 1 per cent, seasonality discounted.

Prices associated with services, many of which are generally thought of as labour intensive, increased by about 1 per cent, with changes in the components, i.e., user operated transportation, personal care and recreation increasing more than the average. The rent component increased by 0.8 per cent. From the fourth quarter of 1965, rents have

increased by 1.6 per cent in contrast to the increase of 0.6 per cent between the fourth quarter of 1964 and the third quarter of 1965.

The price component of business gross fixed capital formation advanced by 0.7 per cent, with machinery prices increasing by 1 per cent and construction prices by 0.7 per cent.

Export prices rose by about 1.5 per cent, reflecting price increases for commodities such as wheat, copper and newsprint.

Implicit Price Indexes
Percentage Change from Preceding Quarter
Seasonally adjusted

	1966		
	1 Q	2 Q	3 Q
Personal expenditure	1.2	1.2	0.5 ¹
Non-durable goods	1.9	1.1	0.5 ¹

(Base-weighted price index of Gross National Expenditure)	(1.2)	(1.5)	(1.0)

¹ The implicit price indexes in some quarters may not provide reasonable measures of price change as a result of marked quarter to quarter changes in expenditure patterns. Such was the case in the third quarter of 1966. The quarter to quarter changes noted in the table for the third quarter of 1966 are based on price indexes in which the effect of changes in expenditure has been discounted. For example, in the third quarter the sharp increase in consumer spending on new cars affected the price movements as shown by the implicit price indexes.

The Components of Demand

Consumer Expenditure

After a slight advance in the second quarter, personal expenditure surged upwards with an increase of 3.3 per cent—a record for the current expansion—to reach a level of \$35.3 billion seasonally adjusted at annual rates. In real terms, the gain was somewhat less, although it was also a record.

Personal income advanced by 3 per cent, but with personal direct taxes increasing by over 10 per cent, mainly as a result of increased tax rates, per-

sonal disposable income rose by only 2 per cent. With personal spending increasing at a greater rate than disposable income, saving in the personal sector declined by about \$350 million.

In the preceding quarter, a decline of 10.5 per cent in durables offset an increase of 2.5 per cent in non-durables, leaving total goods fractionally below the first quarter level. In contrast to the second quarter, this time a record 12.5 per cent advance reinforced a 2 per cent increase in non-durables to raise spending on goods by 4 per cent. Expenditures on services increased by 2.5 per cent.

In the durables category, the dominant item was new cars, spending on which increased by some 29 per cent above the low second quarter level. This sharp advance was accompanied by declines in 1966 model car prices. Purchases and trade-ins of used cars also rose strongly. Both furniture and home furnishings sales showed increases of between 4.5 and 5 per cent, after declines of more than 6 per cent last quarter, while purchases of appliances and radios rose almost 8 per cent; the introduction of colour television may have been a factor here.

Within non-durables, soaps and cleaning supplies and household supplies increased by 8 and 9 per cent respectively. Expenditures on fuel and natural gas registered declines of 6 and 8 per cent. Other non-durable components showed moderate increases. Food purchases rose by 2 per cent, of which one-third was price increase. Sales of total clothing including footwear increased by 3 per cent, electricity by 2 per cent, and drugs and cosmetics by 1 per cent. Expenditure on tobacco and alcoholic beverages rose by 2 and 1 per cent respectively. Fractional declines were shown by gasoline, auto parts and accessories, and stationery and books.

Increases among service components were also moderate. The extra revenue of Canadian air carriers as a result of the strike against five major American domestic airlines in July and August contributed to a rise in purchased transportation of more than 6 per cent above the second quarter level. An increase of about 3 per cent was shown by the personal care series, while household operations rose some 2.5 per cent. Shelter, which accounts for about 40 per cent of all spending on services, rose by about 2 per cent, as did personal services, medical care and financial and miscellaneous services.

Business Gross Fixed Capital Formation

Business spending on fixed capital, including housing, was about 3.5 per cent lower than in the second quarter at an adjusted annual rate of \$11,668 million. The drop of \$416 million was from a decline

in construction, with outlays on residential construction down \$184 million, and outlays on non-residential construction down \$228 million. Spending on machinery and equipment was maintained at almost the second quarter rate.

The value of housing put in place dropped 8 per cent to an annual rate of \$2,108 million. Housing starts dropped from 134,500 to 128,800 at adjusted annual rates, while completions fell from 175,400 to 168,400.

Units under construction in urban areas at the beginning of the third quarter totalled 83,100, at an adjusted annual rate, compared with 106,600 at the start of the second quarter.

The annual rate of non-residential construction activity slowed from \$4,812 to \$4,584 million after allowance for seasonal factors. Although a breakdown of this figure is not available, indications are that the decline was noticeable in both building and engineering-type construction work.

The estimate of outlays on machinery and equipment showed virtually no change from the second quarter. A rise in demand for imported non-farm machinery and equipment together with larger outlays for commercial vehicles was offset by a drop in domestic demand for farm machinery and non-farm domestic machinery.

Non - farm Business Inventories

The rate of investment in business inventories slackened appreciably in the third quarter of 1966 in contrast to the significant accumulation in the second quarter of 1966. Seasonally adjusted estimates show a stock increase of \$560 million at annual rates, compared with \$1,292 million in the previous quarter. The substantial drop in the rate of increase in the third quarter was spread among all the major industry groups except for non-durables within manufacturing. It was most notable in wholesale and retail trades. There was a significant liquidation in the stocks of motor vehicles at the retail level, reflecting strong sales.

Change in Non-farm Business Inventories

(Seasonally adjusted, at annual rates)

	1966		
	1 Q	2 Q	3 Q
	millions of dollars		
Manufacturing	432	460	388
Durables	436	336	180
Non-durables	- 4	124	208
Wholesale trade	- 88	372	36
Retail trade	240	392	116
Other industries	76	68	20
Grand totals	660	1,292	560

Among all major industry groups, the strongest accumulation was in manufacturing, contributing about 70 per cent to the total build-up of business holdings in the present quarter. The following table shows the value of physical change in non-farm business inventories by industry for the first three quarters of 1966.

Manufacturers' total stocks increased in the present quarter but at a lower rate when compared with the previous quarter. All the components of durables and non-durables showed stock accumulation, with the exception of the stocks of transportation, in durable goods, and the stocks of tobacco, in non-durable goods.

Increases in manufacturing stocks took place at all stages of production, the highest being in the stocks of goods-in-process. The stock-to-shipments ratio for manufacturing as a whole was higher when compared with the ratio of the previous quarter, because of the effect of stock accumulation coupled with a decline in shipments of close to 2 per cent.

Within retail trade, there was a build-up of stocks of all non-durable goods. A small increase in the stocks of all other durable goods was more than offset by a large liquidation in the stocks of

motor vehicle dealers leaving, on balance, a small accumulation at the total retail level. The stock-to-sales ratio for the industry as a whole was lower than the ratio of the previous quarter but was above the average ratio of the current economic expansion.

Modest increases were recorded in the stocks of wholesale traders. All the increase in the stocks of wholesalers was accounted for by durable goods. There were offsetting movements within non-durable goods. The stock-to-sales ratio for the industry as a whole was lower than the ratio of the previous quarter.

Exports and Imports of Goods and Services

The deficit in the external account,³ at an adjusted rate of \$1,092 million, was \$88 million higher than in the previous quarter. This increase resulted from a \$304 million rise in the non-merchandise trade deficit, that was partly offset by an improvement of \$216 million in the merchandise trade surplus. As previously mentioned, foreign aid had a marked effect, raising both the merchandise surplus, and the non-merchandise deficit, although, of course, the overall balance remained largely unaffected by this transaction.

Exports and Imports of Goods and Services¹
(Seasonally adjusted, at annual rates, in millions of dollars)

	Goods			Services			Current balance
	Exports	Imports	Net	Exports	Imports	Net	
1965-1Q	8,268	8,120	148	2,356	3,468	- 1,112	- 964
2Q	8,552	8,312	240	2,420	3,680	- 1,260	- 1,020
3Q	8,812	8,652	160	2,504	3,740	- 1,236	- 1,076
4Q	9,316	9,460	- 144	2,396	3,756	- 1,360	- 1,504
1966-1Q	10,056	9,528	528	2,624	3,884	- 1,260	- 732
2Q	9,888	9,580	308	2,620	3,932	- 1,312	- 1,004
3Q	10,424	9,900	524	2,664	4,280	- 1,616	- 1,092
2Q 1966 to 3Q 1966 per cent change	5.4	3.3		1.7	8.9		

¹ Seasonally adjusted figures for 1965 and first quarter 1966 do not incorporate revisions to the original data made by the Balance of Payments Section as shown in DBS Catalogue No. 67-001 for the third quarter 1966. National Accounts figures do not include allowances for immigrants' or emigrants' funds and inheritances.

After allowance for seasonal factors, exports were higher for wheat, fish, newsprint, woodpulp, crude petroleum, copper, asbestos and zinc, while sales were lower for lumber, nickel, natural gas, iron ore and fertilizers. Data on commodity imports on a detailed basis are not available.

Country-of-origin trade figures show a drop from the second quarter in both exports to and imports from the United States. The increase in exports was primarily in markets other than the United States and the United Kingdom.

Larger deficits in the travel account, interest and dividend account, and particularly in the mis-

cellaneous service account (reflecting a sharp increase in official contributions) were the main elements in the change in non-merchandise trade.

Government Sector

Seasonally adjusted at annual rates, total expenditures of all governments combined (excluding inter-government transfers) increased by 5.5 per cent during the quarter. Total government revenues increased at a slower rate, just over 3 per cent, with the result that the surplus, on a National Accounts

³ National Accounts basis.

basis, declined from a rate of \$576 million in the second quarter to a rate of \$192 million in the third quarter.

Higher outlays which raised government expenditure to an annual rate of \$18,748 million were mainly due to a 7 per cent increase in expenditure on goods and services. This increase was mainly associated with higher international assistance payments at the federal level and an expansion in capital spending at the provincial-municipal level. The remainder of the increase in government spending resulted from higher subsidy payments at the provincial level and higher transfers to persons at the federal level. The introduction of new home owner property tax rebate programmes in Alberta and Saskatchewan, and increased payments in Manitoba accounted for most of the increase in subsidies. Increased outlays on unemployment insurance benefits and grants to universities were responsible for the increase in federal transfer payments.

Total combined revenue reached an annual rate of \$18,940 million in the third quarter, a rise of almost \$600 million from the preceding quarter. About three-quarters of the increase was attributable to higher personal tax receipts, particularly at the federal level. This sharp rise in federal personal income taxes from an unusually low rate in the second quarter was in part due to higher rates of tax effective June 1 1966, which were not reflected in tax receipts until the following month.

Revenue from indirect taxes rose by 2.5 per cent with most of the gain at the provincial level, and resulted both from an increased volume of transactions and from tax rate changes in a miscellaneous group of taxes in Newfoundland, Quebec and Ontario. Contributions to the Canada and Quebec Pension Plans continued at a high level and were responsible for the increase in employer and employee contributions.

Offsetting these increases somewhat were declines in corporation tax liabilities.

The Components of Income

Labour Income

Wages, salaries and supplementary labour income seasonally adjusted rose 2.1 per cent from the second to the third quarter.⁴ This change was similar to that recorded between the first and second quarters.

The goods-producing industries advanced 1.5 per cent, largely the result of a 2.5 per cent in-

⁴ Estimates of labour income are usually the summation of monthly figures for the respective quarter. However, because of implementation of the new standard industrial classification, together with methodological changes affecting the monthly indicators, it was necessary to make the third quarter estimates on the basis of actual figures for the first two months and a projected figure for the third month.

crease in manufacturing wages and salaries. Construction wages and salaries declined by 1 per cent in the third quarter.

Seasonally adjusted wages and salaries for the service-producing industries were up 3 per cent. Government non-military wages and salaries showed a gain of 5.5 per cent in the third quarter with part of this increase attributable to retroactive wage payments made to both federal and provincial government employees. Trade advanced 2 per cent and the finance, insurance and real estate, and non-government service industries were up about 2.5 per cent. Transportation, communication and other utilities wages and salaries rose 2.5 per cent. This gain would have been approximately 3.5 per cent, had there not been a major industrial dispute in this industry.

Investment Income

Corporation profits (before taxes and before dividends paid to non-residents) declined almost 8 per cent in the third quarter to a level of \$4,916 million seasonally adjusted at annual rates. This movement followed a relatively stable level of profits in the preceding three quarters. It was the first large decline since the first quarter of 1961, and may have been affected to some degree by the work stoppages that took place during the quarter.

The decline was widespread among many industries. Within manufacturing the wood, paper, metal, electrical, and petroleum and coal industries showed large decreases. Some manufacturing industries increased their level of profits, notably food and beverages, printing and publishing and non-metallic minerals. However, profits of the manufacturing group in total declined by 13 per cent. Among the other industries, only retail trade showed increased profits, while profits in the utilities remained unchanged. Declines were registered in the mining, wholesale trade, transportation, finance and service industries.

Rent, interest and miscellaneous investment income declined on a seasonally adjusted basis by 2 per cent from the level of the second quarter. The decline was largely attributable to trading profits of federal government enterprises which were down by \$96 million at annual rates. This change was influenced by the nationwide rail strike that occurred during the quarter. Time lost in the entire transportation industry rose to 319,400 man-working days in August alone compared to 206,700 man-working days for the full year 1965.

Non-farm Unincorporated Business

Net income of non-farm unincorporated business increased by 6 per cent in the third quarter to \$3,032 million at seasonally adjusted annual rates. Retail trade was mainly responsible for the increase, rising sharply over the second quarter figure. This gain in trade was partly offset by a decline of over 10 per cent in the construction industry.

Accrued Net Income of Farm Operators

Accrued net income of farm operators at seasonally adjusted rates increased to \$2,412 million, a rise of 5.5 per cent over the second quarter.

The changes in the value of grain and livestock production showed offsetting movements. While the value of grain production rose, largely as a result of the higher profits of the Canadian Wheat Board, the value of livestock production fell on account of lower marketings. Cash income from all other farm products was up sharply, notably dairy products, rapeseed and vegetables.

Production by Industry

Seasonally adjusted Real Domestic Product less agriculture for the third quarter of 1966 showed no change from the previous quarter, as a result of the one per cent increase in the service-producing industry group being offset by a decline of equal magnitude in the output of the goods-producing industry group.

Among the goods-producing industries, declines ranging from about 3 to 7.5 per cent were recorded in mining, construction and forestry. Manufacturing

increased fractionally from its second quarter level, as a result of the recovery of its durable manufacturing component from a marginal decline in the second quarter. Movements within non-durables were mixed and largely offsetting. Electric power and gas utilities increased by about 2 per cent.

Among the service-producing industries, all but one of the major industry groups showed increases in the second quarter, ranging from about one per cent in community, recreation, business and personal services to 2.5 per cent in trade.

The only decline within the service-producing group was recorded in transportation. This was almost entirely the result of a drop in the output of the strike-affected railway transport industry.

Trade was the largest contributor to the third quarter gain, accounting for about three-quarters of the advance in service-industry output. Within trade, the 3 per cent increase at the retail level accounted for the larger part of the increase in the third quarter, while wholesale trade showed a more moderate increase of just over one per cent.

FIRST NINE MONTHS 1966

Introductory Review

For the first nine months of 1966, Gross National Product advanced 11.3 per cent over the same period in the preceding year. Although this 11.3 rate of advance in the value of GNP was higher than the 9.7 per cent recorded in the full year 1965, in real terms the increases were 6.6 per cent for both periods because of some acceleration in the rate of price rise. Within the year 1966, quarter-to-quarter increases in Gross National Product have become successively smaller, ranging from the unusually strong first quarter advance of 4.5 per cent to the current advance of 0.7 per cent.

Turning again to the nine-month comparison, final demand increased at a slightly greater rate than did the value of production, and as a consequence there was an advance in imports of over 14 per cent. The strength in demand was broadly based, extending to all categories other than new housing which increased by only 4.5 per cent. In contrast to this, business expenditures on plant and equipment rose by 19 per cent, exports 17 per cent, government expenditures 15 per cent, and consumer spending 9 per cent.

Advances in the income components were more diverse with labour income increasing by 13 per cent, while profits showed virtually no change.

Accrued net farm income rose by 43 per cent, while net income of the unincorporated business sector increased by only 3 per cent.

Price Movements

The price component of Gross National Product advanced by 4.4 per cent in the first nine months of 1966 compared with the like period of 1965. The annual change from 1964 to 1965 was 2.9 per cent. In most cases price advances in the first nine months of 1966 were greater than those in 1965.

With the exception of durable goods, all major categories of personal expenditure showed an acceleration in the rate of price increase. Food prices rose by nearly 7 per cent so that the advance of 8 per cent in value of food expenditures was reduced to 1.5 per cent in real terms. Prices of goods other than food increased by only 1.5 per cent, with the durable goods component declining by half of 1 per cent. Service prices advanced by 3.5 per cent compared with 3 per cent in the previous year.

Prices associated with business fixed capital formation showed less of an increase in 1966 than in the preceding year, largely due to the machinery and equipment component which increased by 1.5 per cent in 1966 compared with the 2.5 per cent rise in 1965. Construction prices⁵ advanced by 5 per cent in the first nine months of 1966, compared with an annual increase of 5.5 per cent in the preceding year.

⁵ The price components of construction do not take account of changes in productivity or in profit margins. If profit margins increased in 1966, these indexes would understate price change.

The price components of exports and imports rose by 3.5 and 2 per cent respectively, in contrast with changes of 1 per cent in exports and half of 1 per cent in imports in the preceding year.

Personal Expenditure

Consumer expenditure for the first three quarters of 1966 was almost 9 per cent higher than for the corresponding period of 1965, and almost 1 per

cent above the rate of increase for 1965 as a whole. With prices rising by somewhat more in 1966 than in 1965, the advances in personal spending in real terms were 6 per cent in 1965 as a whole and 5.5 per cent in the first three quarters of 1966. For the first nine months of 1966 spending on non-durable goods and services increased by 10 and 9 per cent respectively while spending on durable goods rose by 5 per cent. In real terms, however, the increases in all major categories were around 5.5 per cent.

Per Cent Change — Value, Volume and Price

	1965 1964			9 months 1966 9 months 1965		
	Value	Volume	Price	Value	Volume	Price

Exports	6.2	5.0	1.2	16.8	13.0	3.4
Total final demand	9.2	6.4	2.6	12.3	8.1	4.0
Imports	12.6	12.1	0.4	14.3	12.2	1.8
Gross National Expenditure	9.7	6.6	2.9	11.3	6.6	4.4

The following table shows the pattern of increases in consumer expenditure in the first three quarters of this year compared with the same period

of 1965 in relation to the changes between full years 1964 and 1965.

	Per cent change in year 1964 to year 1965	Per cent change in 3 quarters 1965 to 3 quarters 1966
Total non-durable goods	7.3	9.9
Food	5.8	8.5
Tobacco	8.2	6.4
Clothing	5.9	6.3
Other	10.1	14.4
Total durable goods	11.4	5.0
Autos, new and used	14.2	1.2
Household durables	7.9	9.8
Other	9.8	9.3
Total all goods	8.1	8.8
Total services	8.1	9.0
Total consumer expenditure	8.1	8.9

Business Gross Fixed Capital Formation

Business spending on fixed capital, including housing, was 16 per cent higher than the three quarters of 1965. The rise in business fixed capital spending on plant and equipment was 19 per cent. The latter figure of 19 per cent is higher than the 16 per cent increase in investment intentions for the full year as contained in the March report⁶, but lower than the 23 per cent increase in investment intentions recorded in the mid-year survey⁷. The main element of strength recorded in the National Accounts projectors was the demand for non-residential construction, which was 23 per cent higher than the comparable period of last year. Spending on machinery and equipment was up 15.5 per cent. New residential construction increased by only 4.5 per cent. Although industrial detail is not available, the mid-year survey suggested that the main strength was centred in such manufacturing industries as food and beverages, paper, primary metals and transportation equipment; and in such utilities as electric power, railway transport, telephones, air transport, and oil and gas pipelines.

⁷ DBS Catalogue No. 61-206.

Exports and Imports of Goods and Services

During the first three quarters of 1966, the deficit in the external account on a National Accounts basis narrowed somewhat from what it was in the same period in 1965.

This change resulted from an improvement of about \$240 million in merchandise trade surplus, partially offset by an increase of \$185 million in the deficit on non-merchandise trade.

Trade of Canada figures, DBS Catalogue Nos. 65-002 and 65-005 for eight months provide information on the various components of merchandise trade. Notable increases among the export categories were wheat, up nearly 50 per cent, pulp, paper, etc., up 11 per cent, metals and metal products, up 10 per cent, and motor vehicles up a striking 240 per cent or \$205 million. In merchandise imports, machinery and equipment other than motor vehicles rose 24 per cent, responding to strong demand by business for capital goods.

There was little change in the freight and shipping account balance between 1965 and 1966. However, other service account balances deteriorated, particularly interest and dividends, official contributions, and travel.

¹ The figures here do not exactly correspond to the data included in Table 8 of this report because they include the revisions made to the data by the Balance of Payments Section and published in DBS Catalogue No. 67-001. They exclude, however, migrants' funds and inheritances.

Government Sector

Reflecting the continuing high levels of income and employment, total revenues of all governments combined, excluding inter-governmental transfers, increased by 14 per cent, or \$1,714 million, in the first nine months of 1966 compared with the same period of 1965. Over \$500 million of the increase in government revenues was due to employer and employee contributions to the Canada and Quebec Pension Plans which began operations in January 1966. Receipts from indirect taxes rose sharply and accounted for over one-third of the gain in absolute terms. Federal indirect tax revenues rose almost 12 per cent, attributable to higher returns from customs duties and excise taxes. The increase in provincial-municipal revenues reflected mainly gains in sales and gasoline taxes, associated in part with higher tax rates in Ontario and extended tax bases in Ontario and Saskatchewan, as well as increased real property tax revenues.

Much of the rest of the gain in total revenues occurred in personal direct taxes which rose by 11.5 per cent. This rate of increase was much higher at the provincial-municipal level, where personal income tax receipts rose by about 25 per cent, than at the federal level where the increase was 6 per cent. The differing rates of increase were, in part, caused by changes in the federal tax rates which occurred in July 1965 and June 1966 and a further abatement of three percentage points of basic income tax in favour of the provinces, on January 1, 1966.

Total expenditures of all governments rose by 12.5 per cent, with most of the increase accounted for by higher outlays on goods and services and transfer payments to persons. Increases in expenditures on goods and services occurred at all levels of government and were in general the result of higher outlays on capital goods and salaries and wages. At the federal level, there was also a marked increase in international assistance payments.

Transfer payments to persons increased by about \$300 million. Two-thirds of the increase was at the provincial-municipal level and was caused by larger grants to hospitals and educational institutions. The gain at the federal level reflected the lowering of the age limit for old age security payments.

With total revenues exceeding total expenditures in the first nine months of 1966, the surplus, on a National Accounts basis, increased by over \$200 million to a level of \$220 million. The improvement in the surplus position resulted from contributions to the Canada and Quebec Pension Plans. Exclusive of these pension plans, at the federal level, the surplus fell from \$229 million in the first three quarters of 1965 to \$19 million in the first three quarters of 1966 and at the provincial-municipal level the deficit widened from \$225 million to \$332 million.

Labour Income

Reflecting increases in remuneration of approximately 6 per cent and continuing increases in employment, wages and salaries in the first three quarters of 1966 were 13 per cent higher than in the corresponding period of 1965.

The goods-producing industries advanced sharply, by about 14.5 per cent. The gains were concentrated in the manufacturing industries, which increased by over 12 per cent, and the construction industry, where the increase was about 28 per cent.

The service-producing industries increased by 11 per cent, somewhat less than the goods-producing industries. The industry increases ranged from 11 to 14 per cent with the exception of the finance and insurance group and the transportation, storage and communication group, the latter having been affected by a major strike in 1966.

Investment Income

The level of corporation profits for the first three quarters of 1966 was virtually unchanged from the same period of the previous year. Significant movements took place within these periods as the level of profits was increasing in the second and third quarters of 1965, while it was declining in the second and third quarters of 1966.

As usual, the movements of profits by industry over the nine-month period were mixed. Declines in excess of 10 per cent were registered by the textile, paper and transportation equipment industries. Most of the other industries showed moderate gains.

During the same period, corporate capital consumption allowances increased by almost 10 per cent, with the result that the level of earnings before provision for capital consumption showed an increase of 4 per cent.

Rent, interest and miscellaneous investment income for the first three quarters of 1966 increased by 9 per cent over the corresponding period of 1965. Trading profits of government enterprises were affected by strikes, particularly in transportation, and moved up by 5 per cent over the nine months.

Accrued Net Income of Farm Operators

Accrued net income of farm operators in the first three quarters of 1966 increased 43 per cent over the corresponding period of 1965.

The increase can be attributed to all components of farm production. The value of grain production increased largely as a result of the record

high level of the 1966 crop, while increased prices for cattle and hogs contributed to the rise in livestock income.

Non-farm Unincorporated Business

During the first three quarters of 1966, net income of non-farm unincorporated business rose by 2.5 per cent over the same period of last year.

The service industries were mainly responsible for the increase which was partly offset by a 2 per cent decline in retail trade.

Production by Industry

Real Domestic Product less agriculture for the first nine months of 1966 was 6.5 per cent higher than in the corresponding period of 1965. About 40 per cent of this gain came from the 8 per cent advance in manufacturing, with both the non-durable and the durable manufacturing components contributing about equally to the increase. Trade and the transportation, storage and communication group contributed another 21 per cent to the increase in non-agricultural real output. The largest increase was recorded by electric power and gas utilities which advanced by over 13 per cent. Among other industry groups to show strong gains in 1966 were construction and transportation, up by 7.5 and 8 per cent, respectively. Increases ranging from 4.5 to 6.5 per cent occurred in forestry, trade, finance, insurance and real estate, the community, recreation, business and personal service group and in mining. Public administration and defence advanced by 2 per cent.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force were fractionally lower in November while the unemployment rate increased to 3.7 per cent.

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose by 1.0 per cent in October, principally as a result of increases in mining and manufacturing offset in part by a 1.4% decline in electric power and gas utilities.

		total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income continued to rise in August.

Average hourly earnings in manufacturing were \$2.27 in August, an increase of 2 cents from the preceding month.

The average workweek was 40.9 hours in August with the increase being reflected entirely in the non-durable goods component.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Total value of building permits fell off in October as a result of a sharp drop in the residential sector.

Housing starts decreased sharply in November and completions picked up perceptibly following the low levels of the previous two months.

value of building permits				new dwelling construction, centres 5,000 and over		
	total	non-residential	residential	starts, total	completions, total	under construction

EXPORTS AND IMPORTS (More detail in Tables 91 and 92)

Total exports increased in October, mainly attributable to higher exports to the United States.

Total imports were higher in October due principally to increases to United States and "all other countries".

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale index remained stable in November.

The index of thirty industrial materials continued its downward trend in November.

The consumer price index rose by 0.1% to 145.5 in November, as increases in durables, non-durables and services were almost entirely wiped out by a 0.6% decline in the food component.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes re-estimates of error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries. Source: Labour Gazette, Department of Labour.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹See footnotes 1 and 2 and source in Table 28. ²Employment indexes in total manufacturing and in its total durable and non-durable components are given in Table 28. ³In addition to those listed, tobacco products; knitting mills; printing, publishing and allied; and miscellaneous manufacturing industries are included in non-durable manufacturing. ⁴Except machinery and transportation equipment industries.

Table 31: average weekly wages and salaries, ¹ by industrial divisions, based on the 1960 standard industrial classification-(dollars)

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Source: Refined Petroleum Products (45-004), D. B. S.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. ²Planks and boards, flooring and square timber. ³Hollow blocks including fireproofing and load-bearing tile. ⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. ⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

(revised)

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.
²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.
³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D. B. S.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.

³Many mills were operating at more than the standard 26 working days in the month.

⁴Includes solid, coated, bulk, packages and novelties. ⁵Includes beef stews and boiled dinners. ⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D. B. S.

Table 85: value of retail trade by types of business and provinces, based on the unrevised standard industrial classification—concluded

monthly averages or months	lumber and building material	furniture, appliance and radio	resta- urants	fuel dealers	drug stores	jewellery stores	miscel- laneous	Atlantic prov.	Que.	Ont.	Man.	Sask.	Alta.	B.C.

¹Monthly averages for 1964 and 1965 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ³Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments.

²Expenditures for administration applicable to the Treasury Board have not been transferred from Finance.

³Under the Technical and Vocational Training Assistance Act. ⁴Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁵Includes treatment and rehabilitation services.

A NOTE TO USERS

REVISIONS:

The unadjusted data on consumer credit by sales finance companies and the cash loans series by consumer loan companies in Table 90 have been revised starting with January 1965. The monthly, quarterly and annual unadjusted totals reflect these changes.

The seasonally adjusted counterparts for the above series and the monthly and quarterly series on pages S-8 and S-9 are further modified from last month to take account of the revisions in the unadjusted data.

REPRINTS:

Copies of this month's feature article are available on request, free of charge, from the Data Bank and Economic Indicators Section, National Accounts and Balance of Payments, D.B.S.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2204-501

RECENT DEVELOPMENTS IN THE WORK OF THE DOMINION BUREAU OF STATISTICS¹

The impact of electronic computers on data collection, processing and distribution techniques is increasingly apparent in the Dominion Bureau of Statistics. One example of interest is exploratory work designed to develop a system which will enable geographic codes to be assigned by computer to ordinary mailing addresses. Also in the developmental stage is a data storage, retrieval and analysis system for economic time series.

INDUSTRY STATISTICS

The Industry Division has been using computer processing in the compilation of principal statistics of industries since the annual survey of 1961. Beginning with the 1967 surveys, an interim program will be introduced for the aggregation by computer of commodity detail from the manufacturing and forestry industries for certain geographical areas. An extended computer system to edit and compile both commodity and principal statistics is planned for the 1970 survey. The development of the Industrial Commodity Classification will also lead to further computer applications. This classification will provide for more and improved product and material statistics and will constitute a systematic framework for the coding of commodity data collected by the Industry Division. It should result in a classification which can generally be related to three existing commodity classifications: the Standard, the Export and the Import.

A new survey of the fishing industry scheduled for publication in 1967 will present statistics of 1965 operations. It is the first survey conducted on an establishment basis, and will furnish principal statistics amenable to integration with those of other industry surveys. The enumeration, involving complete coverage of establishments with boats of 25 tons or more and a sampling of smaller establishments, was carried out by officers of the federal Department of Fisheries and the Quebec Bureau of Statistics. It is proposed to conduct this survey at five-year intervals.

Reports on the mining and logging industries will implement the revised Standard Industrial Classification and the New Establishment Concept beginning with the 1964 surveys; they will also contain data for 1961 through 1963 on both the old and new bases. Changes in the treatment of data for large integrated mining-smelting-refining companies have resulted in substantial revisions to the principal statistics for mining. These will also involve considerable revisions to the statistics of the smelting and refining industry in manufacturing.

¹ This is the eighth of a series of notes intended to keep readers of the "Canadian Journal of Economics and Political Science" in touch with the evolution of statistical programs in Canada. The first note was published in November, 1959; subsequent notes were published in February issues of the Journal. This note is reprinted here by kind permission of the Editor. Reprints are available on request.

The new statistical approach, which treats the smelting and refining operations of integrated companies as "custom services," will remove the duplication which previously resulted from attempts to value transfers between the various stages of processing. It will assign to the mining industry the final selling value of the products of the combined operations.

Index of Industrial Production

In a special report issued in May, 1966, the "Annual Supplement to the Monthly Index of Industrial Production", (Catalogue No. 61-005 Supplement), DBS released revised estimates for the monthly and annual index of industrial production and its components from 1949 to 1965, with continuous series shown from 1946. The revised data have also been incorporated into the quarterly and annual real domestic product by industry estimates.

The revisions emanate largely from incorporation into the historical record of more recent census-based annual levels (benchmarks) for manufacturing, mining, and electric power and gas utilities. The new series retain the 1949 weight and reference base and constitute the first stage of a several-stage program. It will extend over a number of years and is aimed at improving the quality and general usefulness of the real domestic product by industry-of-origin data, including the index of industrial production. Census-based annual benchmarks had not been calculated for the index of industrial production beyond the mid-1950's. A major objective of the revision was to remedy this situation, and comprehensive annual benchmarks were accordingly calculated for all industries for at least the year 1959 on a 1948 Standard Industrial Classification (S.I.C.) basis.

The next stage in this program will consist of converting the entire real domestic product system to the 1960 SIC and to a 1961 weight and reference base. Thus, in regard to the index of industrial production components, it should be noted that the indexes are subject to further revisions from 1959 forward. Benchmark levels will be updated to 1961 in industries outside the area of the index of industrial production. Because this will include incorporation of the latest (1961) decennial census data, the historical record from 1951 forward will be changed for such industries as agriculture and wholesale trade.

Productivity Statistics

During the past year DBS released the first annual supplement to the reference paper "Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Nonagricultural Industries, 1947-63", (Catalogue No. 14-501). The supplement, which includes data from 1946 to 1965, incorporates the results of the revision of the real domestic product by industry estimates and extends the coverage of the measures to agriculture, thereby

embracing the entire commercial economy. It also shows the effect on aggregate productivity of the shift from agriculture to the nonagricultural industries. Work on the development of separate productivity indexes for the goods and services producing industries has been started for their possible inclusion in the next annual report on productivity.

The first publication at the detailed industry level was released recently, entitled "Productivity Trends in Industry, Report No. 1: Synthetic Textile Mills, Breweries, Pulp and Paper Mills, 1947-1961", (Catalogue No. 14-502). Work is now in progress to develop similar measures for other manufacturing industries, including iron and steel mills, hosiery mills, and sugar refineries.

Manufacturing Operations of Foreign-controlled Enterprises

Articles in the September 1966 issue of the "Canadian Statistical Review" presented some of the results of a new survey of manufacturing operations in Canada of the larger foreign-controlled enterprises in 1961. The study was a joint undertaking of the Industry and National Accounts and Balance of Payments Divisions. It relates information in establishments gathered by the regular Census of Industry with data on investments in enterprises controlled in other countries, obtained from corporation records maintained for balance of payments purposes. Comparisons are made with similar data for enterprises controlled in the United States for the years 1946 and 1953, but the new survey also includes concerns controlled in other countries.

ECONOMIC STATISTICS

Labour Statistics

In co-operation with the Department of Labour, a feasibility survey of fringe benefits was undertaken in May 1966. This survey covered about 150 establishments selected by size within the manufacturing industry across Canada. It was designed to assess the availability of information relating to supplementary wage costs or fringe benefits from employers' accounting records, and assess the feasibility of collecting such data by mail questionnaire rather than by personal interview. If the experiment proves successful an annual or periodic survey will be developed to extend estimates of unit labour cost, improve estimates of labour income, and provide an indication of the relative importance of various fringe benefits. Information collected in the survey was restricted to those items which can readily be measured in terms of labour cost, such as premium pay; direct payments to employees for time not worked, for example, vacation pay; legally required payments such as workmen's compensation and unemployment insurance; and private benefit plans including life and health insurance, and pensions. Fringe benefits difficult to assess in terms of cost, or of limited importance, were not included in the initial pilot survey (cost of rest periods, miscellaneous services and benefits such as cafeteria facilities, etc.)

The Bureau and the Department of Manpower and Immigration in June 1966 conducted a survey of job vacancies in six centres in Ontario (Kingston, Hamilton, Windsor, Cornwall, Owen Sound, and Collingwood-Midland). The primary purpose was to assess the feasibility of obtaining information on job vacancies through a mail survey. If successful, it will be introduced on a regular Canada-wide basis and will provide information for use in improving the efficiency of employment service operations, for vocational training programs, for counselling through the schools, and for development of immigration programs to attract specific types of workers.

A redesigned sample for the labour force survey was introduced progressively over a two-year period, province by province. The change-over to the new sample in each province was noted in the monthly report "The Labour Force", (Catalogue No. 71-001) for the month in which it took place and an indication was given of the effect of the change-over on major labour force characteristics. A noticeably improved level of reliability has been reached in the estimates for the Atlantic and Prairie regions. This has made possible the release, without restriction, of estimates of the major labour force characteristics for the individual provinces of these regions; series available on request are indicated under "Other Data Available" in the monthly report. A detailed description of the new sample design is provided in "Canadian Labour Force Survey—Methodology", (Catalogue No. 71-504).

During 1966, data were collected through the labour force survey for special studies in the areas of vocational and technical training, and job mobility.

Agriculture

Several new surveys were initiated in agricultural statistics during 1966 by adding questions to existing surveys. Information on the regional distribution of fertilizer use in the Prairie Provinces was collected in conjunction with one of the crop surveys. The field crop yield survey was used to obtain estimates of the flaxseed and rapeseed harvested and to determine the feasibility of changing more crop estimates to a harvested area basis. Information was requested on forage seed output when the annual June acreage survey was taken.

A pilot project was initiated to apply objective crop estimating techniques (counts and measurements of a random sample of immature fruit) to British Columbia apples. This is an extension of similar programs underway in Ontario and Quebec. A new monthly survey was started in 1966 to obtain figures on cold storage holdings of frozen vegetables intended for re-manufacture. Preparation of a revised series of agricultural accounts from 1941 to 1965 was completed in 1966 after a thorough study of the results of the 1958 farm expenditure and income survey and the 1961 Census. The information will be published shortly in the "Handbook of Agricultural Statistics, Part II: Farm Income", (Catalogue No. 21-502).

National Accounts

Good progress in being made on a revised reference document on the national accounts which incorporated new census benchmarks. Very serious consideration is also being given to the possibilities of bringing the Canadian National Accounts more into consonance with the framework now being proposed by the statistical office of the United Nations. International macro-economic accounting concepts are at the moment under intensive review and the Dominion Bureau of Statistics is taking an active part in a series of international meetings dealing with this issue.

Financial Statistics

The financial statistics program is progressing and it is expected that a set of quarterly financial accounts will be published in 1967, covering the period from 1962. These accounts form part of Canada's social accounting system and will show how production in the economy is financed. Data for some sectors will be incomplete and the gaps will be filled in as the work progresses. This year it is expected that quarterly data will become available for fire and casualty insurance companies and for credit unions.

Government Finance

The economic-functional cross-classification of expenditures, which was first devised for the federal government for the fiscal year ended March 31, 1962, was prepared for provincial governments for the fiscal year ended March 31, 1964, and provides answers to two questions: (1) what is the cost of services provided by government, and (2) how does government expend its money to provide these services, that is, by purchase of goods and other services, transfers to other governments, transfers to persons, subsidies to business, etc?

The study on the flow of funds has been extended on a quarterly basis to include significant federal and provincial government enterprises and, on an annual basis, an attempt has been made to show the flow of funds of the federal government by sectors of the economy. The flow-of-funds study was also extended to include an analysis of the balance sheet items and the enterprises of the larger municipalities in Canada.

The survey of municipalities with populations over 50,000 is being extended to obtain employment and payrolls data by function. In addition, the survey has been expanded to include rural and small urban municipalities, under 10,000 population, on a sample basis.

In co-operation with three interested organizations, the Canadian Tax Foundation, the Canadian Council on Urban and Regional Research, and the Institute of Local Government at Queen's University, the Bureau held a conference in May 1966 on the needs of users of municipal finance statistics. Results of this conference are being evaluated and

discussions of probable revisions to the local statistical program have been initiated with officials of provincial departments of municipal affairs.

Co-operation has continued between the Federal-Provincial Relations Division of the Department of Finance and the Dominion-Provincial Tax Structure Committee in preparing analyses of government revenue, expenditure, assets, liabilities, and debt; and providing advice of a statistical nature. A summary of the historical analysis prepared for the Tax Structure Committee was released in February, 1966, and is entitled, "Historical Review, Financial Statistics of Governments in Canada, 1952-62", (Catalogue No. 68-503). The publication contains a description of the conceptual framework underlying government finance statistics prepared by DBS and a selected terminology for use in the financial management series of government finance statistics.

Balance of Payments

Statements of Canada's balance of international payments have been published over a span of four decades. Besides the issue of regular quarterly and annual reports the publication program has included various special publications from time to time. The latter have been designed to cover longer periods by providing perspective and greater degrees of detail than could be offered in regular reports. One of these special volumes, "A Compendium of Balance of Payments Statistics from 1946 to 1965", (Catalogue No. 67-505), has been prepared for publication. It contains revised estimates and a wide range of details over the post-war period relating to international transactions in goods, services and capital movements.

The scope of the monthly publication "Travel between Canada, the United States and Other Countries", (Catalogue No. 66-001), was extended in 1966 to include travel between Canada and countries other than the United States. Details on overseas travel to Canada now include the arrivals of non-immigrant visitors, both on direct services to Canada and on services entering via the United States, classified by country of residence. The series of longer standing, covering the number of Canadian residents returning directly from overseas countries, classified by principal port of re-entry, has been included in the same publication.

Stock of Fixed Capital

Late in 1966 the Business Finance Division released two official publications relating to the stock of fixed capital goods. "Fixed Capital Flows and Stocks, Manufacturing, Canada, 1926-1960 - Methodology", (Catalogue No. 13-522), reviews the concepts, sources and methods used in preparing the statistical material on flows and stocks of capital goods in manufacturing industries. The second publication, "Fixed Capital Flows and Stocks, Manufacturing, Canada, 1926-1960 - Statistical Supplement", (Catalogue No. 13-523), is a complete tabular presentation of the estimates of

flows and stocks in manufacturing. The estimates cover total manufacturing and the detail of manufacturing industries using five different sets of fixed capital goods. Flows and stocks of capital goods have been computed in terms of 1949 constant dollars, 1957 constant dollars, current dollars, and original cost dollars.

Estimates are currently being developed for non-manufacturing industries using different assumptions as to average length of life of assets. Solutions are being sought for problems created by changes in the S.I.C. which have prevented the extension of capital stock estimates beyond 1960.

Housing

The work is almost completed on reconciling intercensal activity in housing as reflected in annual starts and completions with the stock of housing as measured at the census dates in 1951 and 1961. Preliminary findings reveal an understatement of the intercensal activity. At the moment, work consists of verifying the accuracy of the understatement. The primary purpose of this project is to improve the estimates of residential capital formation incorporated in the National Accounts.

Trade

A second report entitled "Exports by Mode of Transport", (Catalogue No. 65-206), has been published for the calendar year 1964. It provides statistics on the types of transport used to move Canadian exports to their markets.

The annual "Trade of Canada, Volume III, Imports, 1962-1964", (Catalogue No. 65-203), will present statistics according to the Import Commodity Classification introduced in January 1964. It also will include a convertibility key for comparing statistics for 1964 with those for 1962 and 1963.

Import statistics as of September 1965 are compiled monthly, but not published, by tariff item and by country. These data are available on request subject to the usual service charge.

A new historical annual series for exports and imports according to the major sections of the classifications for the period 1946-1965 has been developed covering all countries, the United States and the United Kingdom. New series have also been established for the same period and countries based on a secondary classification by stage of fabrication. In addition to providing dollar values, these series will comprise value, volume and price indexes by sections, or major groups of commodities, and by stage of fabrication. This new secondary classification by stage of fabrication replaces the series of imports and exports based on the former concepts of raw, partially manufactured and fully manufactured commodities. Printed copies are available on request from the Development and Analysis Unit of the External Trade Division.

Transport

A new approach to statistics in government was initiated April 1, 1966 with the creation of the Aviation Statistics Centre as a DBS satellite within the Department of Transport. This centre has complete responsibility for the production of aviation statistics required for the administrative purposes of the Department of Transport, the regulatory functions of the Air Transport Board, and for meeting the statistical requirements of other government departments and the general public.

Commodity flow charts have been prepared for shipping which show, in terms of relative size, selected commodity movement on the Great Lakes and in the Atlantic region. Reaction to the charts has been favourable and it is intended to publish them as the "Shipping Report: Part VI".

A major review of the trucking survey was undertaken to evaluate the design of the present survey in the light of changed conditions in the trucking industry and to decide if a new type of survey is warranted. Survey methodology and compilation procedures were also reviewed to improve survey coverage, reliability and accuracy and to attain maximum efficiency of staff resources. The Standard Industrial Classification was introduced in the road transport series during 1966.

The production of a magnetic tape which will enable Canadian railways to convert their commodity statistics from the American Standard Transportation Commodity Classification to the DBS Standard Commodity Classification (S.C.C.) and report to DBS on that basis was implemented in January 1967. This conversion project forms part of the plan to effect uniformity in the production of commodity statistics in DBS from all sources and will place railway freight traffic data on the same basis as those of other modes of transport.

Quarterly and annual data relating to the expenditures on, and inventories of, materials and supplies were collected for the first time from large transport firms for internal use by the National Accounts and Balance of Payments Division. In addition, a special research project set out requirements of transportation data needed for compilation of the Gross Domestic Product. This will become an increasingly important part of the work of the Transportation Section.

SOCIAL, EDUCATION AND HEALTH STATISTICS

Scientific Research and Development

During 1966 there were two additions to the Bureau's program of statistics on scientific research and development. The first was the preparation by the Business Finance Division of a 1963 expenditures matrix for Canada showing sources and recipients of research and development funds by major sector. These sectors represent business

enterprises, governments, private non-profit organizations and educational institutions. Information resulting from the division's regular surveys of the federal government and Canadian industry was supplemented by estimates for the other areas. The matrix was published in the "DBS Daily Bulletin" of May 12, 1966.

The second development was the initiation of surveys of the scientific activities of non-profit organizations and of provincial research councils and foundations. Estimates of expenditure and personnel in 1965 resulting from these surveys will be published shortly. It is probable that the two surveys will be conducted biennially.

Education

The third edition of "The Organization and Administration of Public Schools in Canada", (Catalogue No. 81-535), was released late in 1966. The separate chapters on the provinces were printed in advance and more than 10,000 copies were sold and distributed to provincial departments of education and to faculties of education in universities across Canada.

The "Manual of Accounting for School Boards", (Catalogue No. 12-528), approved by the Federal-Provincial Conference on Education Finance held at DBS in 1964, has been distributed to provincial departments of education for redistribution to school boards within their respective jurisdictions.

Social and Health Statistics

The Bureau is publishing more extensive information relating to diseases. Reports showing discharges from hospitals, and the days of care associated with these discharges, for the approximately 900 diagnostic categories of the International Classification of Diseases, have been published for the years 1960, 1961 and 1962. The information is published by province and sex, and by five summary age groups and sex, and is available on request by detailed age groups at the provincial level. Acceleration of the publication program will put these hospital morbidity publications on a current basis during 1967.

A first tabulation of surgical operations performed in hospitals will be run during 1967 for detailed age-sex groups at the provincial level. This is perhaps the first detailed information of this kind published for such large populations.

The extension of reporting on tuberculosis to include persons treated on an out-patient basis was begun on January 1, 1966. This extension will enable the Bureau to publish statistics that reflect recent major changes in the method and place of treatment of tuberculosis.

Plans are underway for complete computerization in 1967 of annual processing of data pertaining to births, deaths, marriages and stillbirths. Such a

computer program will assist in the compilation of detailed historical data from 1950, for a more penetrating analysis of fertility, nuptiality and mortality trends than has been possible in the past. The program will also help meet increasing demands for social, demographic and medical statistics.

The Vital Statistics Council for Canada, made up of representatives of provincial registration authorities and the Bureau, has undertaken a review of the statistical, administrative and legal uses of items on present birth, marriage and death registration forms. This review should lead eventually to greater uniformity in the content and wording of items on these records, and possibility to standardization in size and format.

A series of technical reports has been initiated in the Health and Welfare Division to record special investigations in vital and health statistics of interest in demographic and health research. The first two reports in this series are "Canadian Abridged Life Tables, 1961-1963" and "Provincial Abridged Life Tables, 1961-1963"; copies are available from the Vital Statistics Section.

The first of an annual series of publications dealing with reported murders in Canada, "Murder Statistics", (Catalogue No. 85-209), was released in February 1966. This report integrated police and court statistics for the first time and included data on the number of murders reported, multiple murders, incidents when murder occurred, court procedures, and the relationship between the victim and the suspect.

A new annual publication, "Training Schools", (Catalogue No. 85-208), relates to children who are found delinquent, neglected, or in need of protection. The report deals with the movement into and out of training schools and social data relating to the children.

Census

Commencing June 1, the 1966 Census of Population and Agriculture was taken throughout all areas of Canada and the returns are being processed through the document reader and the computer. Five bulletins have been released showing preliminary population counts for all incorporated municipalities in the provinces. These releases informed the municipalities of the census counts and outlined the concepts under which the Census was taken. The municipalities were advised that there might be amendments to the preliminary counts (persons temporarily absent at Census date and assigned to their *de jure* residence). Where a municipality indicated dissatisfaction with the census preliminary count, field checks were made to ascertain the correct population counts. Any amendments will be included in the final figures. It is anticipated that the final population figures for the various provinces and municipalities will be available early in 1967.

Quality checks of both population and agriculture were carried out to assess the completeness of coverage and the quality of some of the information collected. Matching of these returns with census data was carried out, and in a number of instances field follow-ups were conducted and necessary adjustments made to the preliminary counts.

In preparation for the 1971 Census, a test of the self-enumeration procedure from a pre-listing of households is scheduled for 1967 and mechanical reading equipment is being examined for possible use on questionnaires obtained through this procedure. The listing of households in the test city, London, Ontario, was carried out in late 1966 and will be checked by the Post Office Department before questionnaires are mailed.

REGIONAL STATISTICS

A new development in the program of the Regional Statistics and Analysis Staff was the direct participation of staff members in operational aspects of special surveys originated or sponsored by agencies outside DBS, specifically, (1) the design and administration of a pilot survey of the Quebec labour force in co-operation with the Quebec Bureau of Statistics, and (2) the design and implementation of a miniature census of population, labour force and housing characteristics of Bell Island, Newfoundland, in co-operation with the Government of Newfoundland and the Atlantic Development Board.

PROGRAMS TO DEVELOP THE USE OF STATISTICS

A program to develop the use of the statistical material available from the Dominion Bureau of Statistics was initiated in 1966. The work will involve presentations at industry meetings and seminars, business association meetings, and visits to individual companies to examine the possibilities and explain the advantages of using DBS information.

DBS has also undertaken a new type of publication called service bulletins which are designed to bring together a number of small items of information previously issued separately and to make generally available information that previously had limited circulation. For persons interested in subject areas of DBS statistical activities, the service bulletin is also designed to maintain a current total picture of those areas. Two bulletins are being issued at present, one for the food-processing industry and another on energy statistics. Others are being planned and should be available this year.

The DBS publications catalogue will be brought up-to-date and re-issued in 1967. It is planned to issue supplements which will keep users in closer touch with current publications.

CENTENNIAL PUBLICATIONS

In lieu of the customary official handbook, "Canada", the Bureau will publish in the spring of 1967 an enlarged, specially designed and profusely illustrated 512-page volume entitled, "Canada One Hundred 1867-1967" and its French counterpart, *Canada Un Siècle 1867-1967*. Designed for college, high school and general public use in Canada and abroad, this special Centennial volume will highlight one hundred years of Canada's social, political and economic development. It will be available through the Queen's Printer, Ottawa, at \$2.00 a copy.

A deluxe edition of the Bureau's official annual reference volume, the "Canada Year Book", and its French counterpart, *Annuaire du Canada* will be released during the summer of 1967. Both editions can be purchased from the Queen's Printer, Ottawa, \$5.00 cloth-bound and \$3.00 paper bound.

THE CORPORATIONS AND LABOUR UNIONS RETURNS ACT ADMINISTRATION (CALURA)

The purpose of the Corporations and Labour Unions Returns Act is to enquire into the extent of non-resident ownership and control of corporations in Canada and the extent of the association of Canadians with International Labour Unions. The first report under the Act was released in July 1965 covering fiscal periods ending in 1962. Reports containing information for the two subsequent fiscal periods were released in 1966 and early 1967. These reports have made available additional information that will assist in a better understanding of Canada's international involvement in the area of corporations and labour unions.

In 1965 legislation was passed by Parliament that has permitted a merging of the statistical activities of the Department of National Revenue with those of CALURA. As a result of this merger of statistical activity more comprehensive corporation financial statistics will be made available commencing with corporation fiscal periods ending in 1965. The additional information to be made available will include company book profits and the reconciliation of this item with taxable income. Such information has not been available in the past and should prove helpful to a variety of users. The first publications in this new series will be available in 1967.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force advanced in December while unemployment declined. The unemployment rate was 3.6 per cent.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production rose by 0.3 per cent in November, with the bulk of the gain originating in electric power and gas utilities which advanced by 2.5 per cent while manufacturing and mining increased marginally.

	total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income and wages and salaries in manufacturing continued their upward trend in September.

Average hourly earnings were higher in September in both non-durable and durable manufacturing, with the gain in the latter being more pronounced.

Average weekly hours in manufacturing were shorter in September as a result of a decrease in the non-durable component.

		total	wages and salaries in manufacturing	average hourly earnings in manufacturing			average weekly hours in manufacturing ¹

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Building permits declined sharply in November in both the residential and non-residential sectors, with the drop in the latter being more pronounced.

Housing starts picked up a little in December following the sharp decrease of the previous month. Completions showed good strength in the period.

value of building permits				new dwelling construction, centres 5,000 and over		
	total	non-residential	residential	starts, total	completions, total	under construction

EXPORTS AND IMPORTS (More detail in Tables 91 and 92)

Exports were generally higher in November.

Total imports declined by 2.2 per cent in November primarily as a result of lower imports from "all other countries".

exports including re-exports (million dollars)

imports (million dollars)

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale price index edged fractionally higher in December.

The index of thirty industrial materials recorded the eighth straight month of decline in December.

The consumer price index advanced 0.3 per cent to 145.9 in December, with the gains in durable goods and services contributing to the rise. The food component remained unchanged.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹The unemployed as a percentage of the labour force for each region. Due to weighting differences, a simple average of the regional rates will not give the seasonally adjusted Canada rate on page S-1, nor the unadjusted Canada rate in table 19.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. ¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Overseas clearances plus U.S. imports for domestic use compiled from returns of Canadian elevator licensees and advice from American grain correspondents.

²Customs exports are adjusted to reflect actual physical movement of wheat and wheat flour from Canada. Data shown for the last three months are not so adjusted.

³Annual data are monthly averages of crop year. ⁴Includes eggs for hatching. Sources: Coarse Grains Quarterly (22-001), Wheat Review (22-005), and Trade of Canada, Exports (65-004), D. B. S.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.³Many mills were operating at more than the standard 26 working days in the month.⁴Includes solid, coated, bulk, packages and novelties. ⁵Includes beef stews and boiled dinners. ⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Monthly averages for 1964 and 1965 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ³Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

¹Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. ²Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. ³Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²Stocks included in the mining index are for producing mines. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are for companies whose operations include smelting and refining.

⁵The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification.

⁶Includes also the machinery industries (except electrical machinery) and the transportation equipment industries.

A NOTE TO USERS

CLASSIFICATION OF NEW MOTOR VEHICLE SALES:

The classification headings of new motor vehicle sales in Table 56 and Page S-5 are changed commencing with this issue from "American type" to "Canadian and United States manufactured vehicles" and from "European type" to "Overseas manufactured vehicles".

Some confusion among users has arisen regarding the definition of American type vehicles. The revised headings correspond to the monthly report on New Motor Vehicle Sales, Catalogue No. 63-007, which stratifies vehicles by *origin of manufacture*. For example, motor car "X" is classified as a Canadian and United States manufactured vehicle because there is an automotive plant in Canada which assembles car "X"; however, cars "X" which are imported would be classified as Overseas manufactured vehicles.

The data pertaining to these series are not affected by the change in heading.

REVISIONS:

(1) The series on births, deaths and marriages by provinces in Tables 4, 5 and 6 respectively have been revised for the entire year 1965. Revised data for the period not covered by the Review are available in the D.B.S. publication, "Vital Statistics", Catalogue No. 84-201.

(2) The data on "bale openings of raw cotton" in Table 51 which had been erroneously reported for the months of July 1966 to date have been amended in this issue.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

CANADIAN MANPOWER STATISTICS¹

INTRODUCTION

Before outlining the requirements for manpower information in Canada, it is useful to review briefly the post-war performance in this field since the demands for economic statistics are largely shaped by policy needs and hence by economic activity.

In the period immediately following World War II, employment was maintained at consistently high levels: as may be seen from Table 1, between 1946 and 1953 the unemployment rate rose above 3% in only three out of the eight years. This buoyant condition resulted from a combination of expansionary economic forces, both domestic and external, as well as deliberate stimulation of the economy by both monetary and fiscal measures.

By the mid and later 1950's, many of the expansionary forces had lost strength (the boom generated by the Korean War had dissipated as well) and the loss of momentum in the economy was reflected in a rise in unemployment, at first gradual, and then much more marked after 1957. Between 1954 and 1957, the unemployment rate averaged just over 4% while between 1958 and 1961, the average rate was almost 7%. At these very high levels of unemployment, regional disparities — which exist even under conditions of full employment — were exacerbated, as were differentials among workers of different ages, occupations and industries.

Since 1961, the beginning of the current upswing in activity, the overall unemployment rate has declined considerably and is approaching the level

TABLE 1. Unemployment Rates 1946 to 1965 — Annual Averages

Year	Unemployment rate	Year	Unemployment rate
	per cent		per cent
1946	3.8	1956	3.4
1947	2.6	1957	4.6
1948	2.6	1958	7.0
1949	3.3	1959	6.0
1950	3.8	1960	7.0
1951	2.6	1961	7.1
1952	3.0	1962	5.9
1953	3.0	1963	5.5
1954	4.6	1964	4.7
1955	4.4	1965	3.9

Notes: ¹ Rates from 1946 to 1952 inclusive have been adjusted for inclusion of Newfoundland and timing of the **Labour Force Survey** which was conducted quarterly before November 1952.

² Rates from 1956 to 1965 are based on estimates revised to take account of 1961 Census population counts.

Source: Based on data from **Labour Force Surveys**.

of the early 1950's. In some regions of the country, in some sectors and occupations, shortages of labour have begun to emerge with consequent pressure on costs and prices. Policy efforts in the manpower field are increasingly directed to **selective** manpower measures — to reduce persistent "hard core" unemployment on the one hand and alleviate or forestall bottlenecks on the other — rather than the **general** stimulative policies typical of the earlier post-war years. The formulation of selective manpower policies requires much more detailed "diagnostic" information (for both current analysis and protection) in addition to the information on indicators (levels) which form the background to aggregative employment policies.

¹ This article is based on a paper presented by Dr S. Ostry and Donald J. Bailey to the Sixth Conference of Commonwealth Statisticians held in Ottawa, September 19-30, 1966.

REQUIREMENTS

Labour Supply

The basic economic intelligence required on the labour supply side is a current (monthly) count of the adult population classified by labour force status i.e. employed, unemployed, not in the labour force. For purposes of analysing trends and changing composition, a number of demographic characteristics of the adult population, the labour force and its components, are also essential — viz. age, sex, marital status. Further, it is apparent from many recent studies that some key decisions affecting the labour market are made in a **family** context and thus it is also useful to have both population and labour force estimates classified on a family basis, although such information is probably not required as frequently as the other demographic data mentioned.

In addition to the demographic characteristics of the labour force and its components, a number of key economic and social characteristics are essential for analytical purposes. These include the occupational and industrial attachment of the employed and the unemployed²; the class of worker status (paid worker, unpaid family worker, own account) and the educational level. A measure of educational levels is not required as frequently as is information on the other variables but ideally it should include estimates of attainment in both academic schooling as well as technical and vocational training. In practice, the latter — and, indeed the former as well — are extraordinarily difficult to measure and no great reliance should be placed on detailed statistics or small differences in the measure overtime and among regions.

Another socio-demographic characteristic of the population and labour force which is of considerable importance for current analysis and projection is immigrant status. While the inflow of immigrants is recorded monthly by the Immigration authorities, only a current survey (such as the sample survey of the labour force) can provide information on the labour market activity of immigrants after entry into Canada. Again, such information need not be provided monthly: semi-annual or perhaps quarterly observations are sufficient. Because the size of the immigrant group is small relative to the total population, the sample size is correspondingly limited. The extent of sampling variability precludes detailed cross-classification of the immigrant estimates and thus intensive analysis is possible only with decennial Census information.

An annual survey of the work experience of the population over a twelve month period provides an extremely useful supplement to the current data based on a reference period of a week. There are, of course, problems of recall involved in all retrospective surveys. But taking this into account, the annual work experience information provides a measure of the total number of different people who were employed or unemployed at some time during the year and the total number of weeks they were employed or unemployed counting all spells they may have worked or looked for work. These data have proved especially useful in the analysis of long-duration unemployment but they are also suggestive in terms of the insight they provide into the phenomenon of labour force turnover.

Finally, information on the hours worked of the labour force is important both as a measure of voluntary and involuntary part-time employment. The former has been growing rapidly in certain sectors of the economy, especially among women. Involuntary part-time is an indicator of one type of underemployment and leads unemployment at the turning points of the short cycle.

² The occupation or industry of last employment. The unemployed also include persons seeking work for the first time.

Labour Mobility

Data on labour mobility are essential for analysis of the labour market allocative mechanism as well as for projections of labour requirements. Mobility, in this context, is defined as a change in an individual's "status" during a specified period of time and thus may be of five sorts (or any combination of these five):

1. Occupational
2. Industrial
3. Geographic
4. Inter-firm
5. Into and out of the labour force.

Mobility as a **measurable or operational** concept is usually conceived of as actual movement, i.e. an actual change in status between two points in time, although what the theory of the labour market really requires is information on the **propensity** to move or, as it is sometimes termed, "latent mobility". Detailed and comprehensive information on actual mobility, if available over time, should serve as an indicator of propensity. Mobility rates are usually required for age, sex, marital, status groups as well as geographic areas. Occupational, educational and sometimes income grouping is also useful. Mobility surveys generally involve retrospective questioning and are thus subject to recall bias. Another possible source of mobility data which has been explored, however, is the mechanical matching of individual administrative or survey records over a period of time. It should be noted that administrative records of individuals can be sampled, if properly identified.

Labour Demand

Current measures of employment have already been mentioned as a requirement on the supply side. They can, of course, also be taken as estimates of demand, i.e. fulfilled demand for labour. Cross-classifications by occupation and industry are basic to demand analysis and projections: information on employment by size of establishment is also often useful. The need for small area statistics will be discussed separately below. The importance of statistics on hours has already been mentioned. A measure of overtime worked is useful as an indicator of demand pressures in specific industries or regions.

Data on employment may be regarded as measures of "satisfied" or fulfilled demand for manpower. What is also required, however, is some measure of **unfilled** demand or job vacancies analogous to the measure of "excess" supply or unemployment. A job vacancy measure serves a number of analytical and operational purposes, particularly if available in occupational and geographic detail. The possible analytical uses of such data have not yet been fully explored — since no country at present has succeeded in producing a satisfactory series in this area — but there seems no doubt that job vacancy information used in conjunction with other labour statistics will contribute substantially to our understanding of the operation of the labour market. Their use for placement purposes and manpower training and mobility programmes appear reasonably clear.

The results of the first of a series of job vacancy feasibility surveys, undertaken jointly by the D.B.S. and the Department of Manpower have now been reviewed and a large scale national survey is now in process of development.

Small Areas

Of recent years governments at both federal and provincial levels have taken a growing interest in stimulating employment and raising income levels in localities which have not shared in the general prosperity of the country. These include both largely urban areas in which the industrial base has deteriorated and rural areas in which farming is no longer an economic proposition.

To carry out a program for improving conditions in specific areas of economic distress, information is first required to develop a criterion for identifying and classifying such areas. Supplementing this is the need for detailed information regarding individuals in the area, to administer and evaluate programs.

The criterion for selecting areas to be assisted involves unemployment, employment and income data. Persistent high levels of unemployment, below average employment growth and low income levels are all taken into consideration in reviewing areas to determine needs.

Information required regarding the labour supply within a designated urban or rural area must relate both to individuals and family units and cover a wide range of economic and social data. Some of this information might be considered as benchmark data for projection purposes and for periodic program evaluation. This includes demographic data and detailed information regarding education, income levels, occupation and industrial attachment.

In addition, information is needed on a more frequent basis regarding changing levels of employment, unemployment and income. Information regarding job mobility and education, having a bearing on availability and quality of the local labour supply is also required on a relatively current basis.

STATISTICS CURRENTLY AVAILABLE

Labour Supply

Information regarding labour supply is derived from three main sources: household surveys including periodic complete enumerations, establishment surveys and administrative records. In Canada the latter source has not, to date, assumed the same importance as in some countries with a less well developed statistical framework.

Of the household surveys, the decennial population census occupies a special position in providing a periodic comprehensive picture of the detailed characteristics of the population and the labour force. Thus the census is the basis source of detail-

ed information regarding the total population of working age — the potential labour force — as well as that segment of the population actively participating in the labour force.

Census data are the only detailed source of such basic qualitative information regarding labour supply as household and family composition, education, income, occupational and industrial attachment. It is also the basic source of demographic labour force and income data at a level of fine geographic detail needed for benchmark purposes, particularly in relation to needs for small area data described above.

The other principal household survey providing information regarding labour supply is a monthly labour force survey of all persons of working age in some 35,000 households. This provides a current measure of the characteristics — age, sex, marital status and location of persons in the labour force and the voluntarily idle, retired, students, and housewives who are not in the labour force.

For those in the labour force with a job, some qualitative information is available regarding their industrial and occupational attachment within broad groupings. Similarly, for the unemployed the number of weeks seeking work is recorded. Because of the relatively small size of the sample (about 1% of the population of working age) sampling variability limits the amount of detail from this source. Thus for most series only Canada and regional data are available.

Aside from providing regular estimates of the size and composition of the labour force, the survey is used as a vehicle for special questions regarding particular attributes. Thus during the past few years supplementary information regarding aspects of labour supply has been obtained through questions regarding educational attainment and job mobility. The labour force characteristics of immigrants as an element of labour supply have also been investigated using the same medium. Because of the relatively high cost per interview, and the restrictions on level of detail imposed by sampling, the labour force sample survey is not an adequate source of data regarding employment trends by industry and small area. Similarly, it is not a suitable vehicle for collecting related data concerning manhours and earnings.

A program of monthly and annual establishment surveys is carried on to provide employment, hours and earnings data at a relatively fine level of detail. This program presently covers the commercial non-agricultural sector but recently has been extended for employment data only, to such non-commercial areas as education and health.

As part of the DBS program of education statistics, information is collected annually regarding school enrolments by grade. Retention rates derived from this body of statistics provide an indication of the extent to which students stay on in school. In terms of the growing emphasis on educational quali-

fications in industry hiring practices, the circumstance that the percentage in final year of high school is rising from about 33% in 1960 to about 53% in 1965 is of some consequence.

Additional qualitative information regarding labour supply will be available from a survey of high school students conducted recently by the federal Department of Manpower. The main purpose of this survey is to throw some light on the process of career decision-making going on among students. However, it will also provide information which, broadly speaking, will be relevant to the occupation intentions of new entrants into the labour force during the next five years.

Administrative records have not been utilized as a source of information on labour supply to the same extent in Canada as in some other countries having a less well developed program of household and establishment surveys. This is also partly because of certain deficiencies in the records which limit their usefulness as economic statistics.

Information collected annually in connection with the renewal of unemployment insurance books provides information in considerable detail regarding characteristics of that segment of the paid worker labour force covered by unemployment insurance (about two-thirds). The completeness of the information is restricted by the exclusion of workers in certain industries, e.g. agriculture, and salaried workers over a specified wage ceiling. If, as has been recommended recently, coverage is made universal the value of these data as a qualitative measure of labour supply will be greatly increased.

Subject to the limitations noted, the annual sample enumeration of the insured population has been utilized to provide some information regarding geographical, occupational and industrial mobility. This investigation was carried out by comparing the location, occupational and industrial attachment of a sample of the insured population at time of book renewal. It could not take account of movements taking place over the year.

Some useful information regarding labour supply is available from statistics of persons registering for jobs with the National Employment Service. From this source, information is available regarding the personal characteristics and occupation of the job applicant. This series suffers from the defect that it is influenced by the administrative provisions that claimants for unemployment insurance must register for employment.

At the present time persons applying for employment at public employment offices are classified, by occupation, according to the U.S. Dictionary

of Occupation Titles. This detailed classification is not entirely applicable in the Canadian context and is not consistent with the Canadian Census classification. Recently DBS and the Department of Manpower have launched a joint project to establish a detailed Canadian occupational classification. The objective of this project is to create a classification system sufficiently detailed for operational use in placement work while suitable at a more aggregative level for statistical use. At this aggregative level the classification will also be compatible with the International Standard Classification of Occupations.

Statistics Available regarding Labour Demand

Information regarding labour demand is much less extensive than data regarding labour supply. The second Annual Report of the Economic Council recognized the need for such data and as noted earlier an experimental project to develop information is underway. At present, however, the only information on this aspect of the global labour market is that obtained from administrative or quasi-administrative sources.

The principal source of labour demand data is the listing of job openings filed with employers at offices of the Canada Manpower Centre. Since registration is not mandatory, vacancies notified represent only a portion of total job openings and tend to give a disproportionate weight to unskilled occupations.

The other source of information regarding labour demand is a semi-annual survey of hirings and separations in certain industries carried out by the Department of Manpower and Immigration and processed in DBS. This survey provides information regarding hirings in terms of total and net labour demand for larger firms in all industries covered by unemployment insurance.

Conclusion

An extensive program of labour statistics based mainly on household and establishment surveys has existed in Canada for many years to meet policy and other needs. A recent shift of emphasis from needs for data for an aggregative approach to problems of employment and unemployment to selective manpower measures to relieve "hard core" unemployment and improve employment prospects in particular areas has required expansion of present programs and the production of new statistical series. These include provision of additional qualitative information regarding the characteristics of the labour force such as education and mobility, improved measures of labour demand and increased employment and other data at provincial and sub-provincial levels of detail.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force were fractionally higher in January. The unemployment rate remained unchanged at 3.6 per cent.

	total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production declined by 0.1 per cent in December. Drops in electric power and gas utilities and mining, amounting to 0.9 and 0.3 per cent respectively, were almost entirely offset by a 0.2 per cent gain in manufacturing mainly due to a 0.9 per cent rise in non-durables, as durables fell by 0.7 per cent.

		total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The index of thirty industrial materials recorded a nine straight month of decline in January.

The consumer price index moved up to 146.0 in January as slight gains were registered in the food index, the services and the durable goods component.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

Table 8: gross national expenditure (million dollars)

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes also publishing and allied industries. ⁵Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp. ²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export. Sources: Pulpwood Production (25-001), Trade of Canada, Exports (65-004), D. B. S.; Bulletins of Canadian Pulp and Paper Association and Newsprint Association of Canada.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected. ²Planks and boards, flooring and square timber. ³Hollow blocks including fireproofing and load-bearing tile. ⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada. ⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada. Data shown for the last three months are not so adjusted.
²Includes stocks held by manufacturers, wholesalers and other warehouses. ³Many mills were operating at more than the standard 26 working days in the month.
⁴Includes solid, coated, bulk, packages and novelties. ⁵Includes beef stews and boiled dinners. ⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

Source: Retail Trade (63-005), D. B. S.

Table 85: value of retail trade by types of business and provinces, based on the unrevised standard industrial classification—concluded

¹Monthly averages for 1964 and 1965 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ³Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

¹Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. ²Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. ³Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D.B.S.

¹The number of stocks included has varied over the period; the totals shown in the column headings represent the current coverage. ²Stocks included in the mining index are for producing mines. ³Combines the industrials, utilities and finance common stocks. ⁴Stocks included in industrial mines are for companies whose operations include smelting and refining. ⁵The headings for "base metals" and "industrial mines" are not found in the Standard Industrial Classification. ⁶Includes also the machinery industries (except electrical machinery) and the transportation equipment industries. Source: Prices and Price Indexes (62-002). D.B.S.

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments.

²Expenditures for administration applicable to the Treasury Board have not been transferred from Finance.

³Under the Technical and Vocational Training Assistance Act. ⁴Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁵Includes treatment and rehabilitation services.

A NOTE TO USERS

MODIFICATIONS TO HOUSING STARTS AND COMPLETIONS SERIES:

The monthly data on dwelling units started and dwelling units completed in Tables 72 and 73 have been changed from "centres 5,000 and over" to "centres 10,000 and over".

Historical data on the new basis for the years 1962 and 1963 not covered by the Review are provided in the January 1967 Supplement of "Canadian Housing Statistics", Central Mortgage and Housing Corporation and will appear in a later issue of the D.B.S. publication "New Residential Construction, Catalogue No. 64-002.

In addition, the change in the lower limit of the survey coincides with changes resulting from the 1966 Census; commencing with January 1966, the data are shown on the revised 1966 Census area definitions. Data for 1966 on the 1961 Census definitions are provided in the C.M.H.C. publication mentioned above.

The seasonally adjusted counterparts of the above series on the new basis (Page S-6) are changed starting with January 1962.

REVISED LABOUR FORCE SERIES:

The seasonally adjusted labour force series for Canada on Page S-1 and by region in Tables 20 to 25 inclusive have been modified for the entire period from 1953 to date. The unadjusted data are unchanged. The complete historical record of these revisions was published in the Weekly Supplement to the Review (Catalogue No. 11-004) March 22, issue.

RETAIL TRADE STATISTICS:

There are no January data in this issue on retail trade carried in Table 85 and Page S-5. This is caused by the revision of these series in accordance with the 1960 S.I.C. Classification changes and the current monthly sample have been linked to results of the 1961 Census of Merchandising.

The next edition of the Review (May issue) should provide users with the usual data based on the latest revisions to the above tables.

OTHER CHANGES:

(1) All data pertaining to manufacturing shipments, inventories and orders as contained in Tables 40, 41, 45 and Page S-8 have been revised commencing with January 1962. Consequently, there will be a one-month lag in publishing the revisions to allow preparation of the estimates.

(2) The data on the value of wholesale trade (Table 87) have been revised for the years 1965 and 1966.

(3) The seasonally adjusted figures on wages and salaries by province (Table 17) and by industry (Table 18) are modified for 1966.

(4) The quarterly data on the Canadian balance of international payments in Tables 95, 96 and 97 are revised for the entire year 1966.

Annual Subscription: \$5.00 — Single copy: 50c.

**NATIONAL ACCOUNTS, INCOME AND EXPENDITURE
FOURTH QUARTER AND PRELIMINARY ANNUAL
1966**

Annual Review

This report incorporates revisions to capital expenditure data for the years 1965 and 1966, resulting from new information, together with revisions to some of the other GNP components for the first three quarters of 1966.

The Canadian economy in 1966 registered still another strong advance as continued high levels of demand in the domestic sector, coupled with buoyant conditions abroad pushed Gross National Product to a level of 57.8 billion dollars, 10.9 per cent above that of the year 1965. With the economy continuing to operate at high levels of employment, the resulting pressures on prices and costs of this rise in demand were evident in a 4.6 per cent advance in prices, an advance which reduced the 10.9 per cent gain to one of 5.9 per cent in real terms. This compares with an increase of 9.9 per cent in GNP in 1965 which was reduced to a volume gain of 6.9 per cent, after accounting for price advances of 2.8 per cent.

Much of this 11 per cent gain occurred in the first quarter of 1966, when GNP increasing by $4\frac{1}{2}$ per cent¹ registered the strongest quarterly advance in the current expansion. Although increases in demand in that quarter were broadly based, among other things certain special factors contributed both to a marked rise in exports and to a gain in imports that was only fractional, thus reducing the import balance substantially. The quarter-to-quarter gains in GNP for the remainder of the year were more moderate—about 2 per cent in the second quarter, less than 1 per cent in the third quarter when strikes were a major factor, and 2 per cent in the fourth quarter.

The year as a whole saw gains over a wide range of final expenditure categories. For the third successive year, business spending on plant and equipment was a dominant factor, with investment in these categories increasing by nearly 18 per cent in 1966 compared with advances of 20 per cent in each of the two preceding years. At the provincial and municipal levels, government capital spending reinforced demands by the business sector so that total public and private outlays on plant and equipment rose by more than 18 per cent.

For the second successive year outlays on new housing showed only fractional gains, with a sharp decline in mortgage loan approvals by conventional lenders being a contributing factor to

¹ Part of this increase reflects the estimated value of the 1966 record crop of \$1,564 million, \$263 million higher than the value of the 1965 crop.

the marked drop in the number of apartment units started. Single family units started showed a slight decrease.

Investment in business inventories in 1966 was maintained at a rate only slightly less than that of 1965.

Government expenditures on goods and services, including capital goods, increased by 16 per cent. Apart from capital spending, increases in outlays on salaries and wages formed an important part of the over-all change. In this area, retroactive wage payments together with increased salary rates to the armed forces and to members of the public service at the various levels of government, some of which involved adjustments over a period of years, accounted for most of the rise. Entirely as a result of Canada and Quebec Pension Plan contributions, the surplus, on a National Accounts basis, for all levels of government combined, increased somewhat in 1966. Exclusive of these plans, the federal surplus narrowed by about \$440 million while the provincial-municipal deficit widened by about \$240 million.

Consumer spending rose by close to 9 per cent in 1966; with personal disposable income increasing by $9\frac{1}{2}$ per cent, personal net saving rose. Prices of consumer goods increased by $3\frac{1}{2}$ per cent in 1966, as compared with a rise of 2 per cent in 1965. Although over-all consumer demand was strong in 1966, there was no rise from 1965 in spending on automobiles in contrast to marked increases in each of the four preceding years. Durable goods spending as a whole rose by 4 per cent. Outlays on non-durable goods and services increased by $9\frac{1}{2}$ per cent and 9 per cent respectively.

Demand for Canadian goods by the rest of the world increased by some $15\frac{1}{2}$ per cent in 1966, in contrast to a growth of a little better than 6 per cent in 1965. Exports of wheat to countries such as the U.S.S.R. and Mainland China, coupled with a gain of some \$600 million in exports of automotive products mainly to the United States, together accounted for about one half of a \$1.5 billion gain in merchandise exports. Imports also showed a substantial rise, increasing by 14 per cent. The January 1, 1965 Canada-United States Automotive Agreement resulted in a swelling in imports of automotive products; however the historically unfavourable trade balance on these products narrowed in 1966 by over \$100 million. Investment outlays caused a further significant increase in imports of machinery and equipment. Although the surplus on merchandise transactions increased by about \$260

IN 1966, G.N.P. INCREASED BY 10.9 PER CENT COMPARED WITH 9.9 PER CENT IN 1965. IN CONSTANT DOLLARS, THESE GAINS WERE REDUCED TO 5.9 AND 6.9 PER CENT RESPECTIVELY

PERSONAL EXPENDITURE ON GOODS AND SERVICES ROSE BY MORE THAN 8.5 PER CENT OVER 1965, AS A RESULT OF OUTLAYS ADVANCING BY 9.6 PER CENT IN NON-DURABLES, ALMOST 9 PER CENT IN SERVICES AND BY SOME 4 PER CENT IN DURABLES

FOR THE THIRD SUCCESSIVE YEAR, BUSINESS SPENDING ON PLANT AND EQUIPMENT WAS A DOMINANT FACTOR, INCREASING BY NEARLY 18 PER CENT IN 1966. NEW HOUSING SHOWED ONLY A FRACTIONAL GAIN FOR THE SECOND YEAR IN A ROW (SEASONALLY ADJUSTED, AT ANNUAL RATES)

CORPORATION PROFITS DECLINED FRACTIONALLY; LABOUR INCOME WITH A 13 PER CENT GAIN SHOWED ONE OF THE STRONGEST YEAR-TO-YEAR ADVANCES SINCE 1951. THE G.N.P. IMPLICIT PRICE INDEX ROSE BY 4.6 PER CENT IN 1966 AS AGAINST 2.8 PER CENT IN 1965, AND PRODUCTIVITY INCREASED BY LESS THAN IN 1965

million, this improvement was partially offset by a widening of the deficit on non-merchandise current transactions, resulting in some narrowing in the current account deficit, on a National Accounts basis.

The following table summarizes the pervasive strength of demand in 1966. It is interesting to note that external sources of supply continued to provide the same proportion of the increase in demand in 1966 as in 1965.

Final Demand and its Sources of Supply

Value of change from preceding year¹

	1964	1965	1966
	billions of dollars		
Demand:			
Persons.....	2.2	2.4	2.8
Government	0.6	0.9	1.6
Business investment	1.4	2.1	1.6
Plant and equipment	1.2	1.4	1.5
Housing	0.3	0.1	0.1
Inventory change.....	- 0.1	0.6	-
Non-residents (exports)	1.4	0.6	1.7
Residual error	- 0.2	-	- 0.3
Increase in total demand	5.3	6.1	7.3
Supply:			
Domestic production	3.7	4.7	5.3
Non-residents (imports)	1.3	1.4	1.7
Residual error	0.2	-	0.3
Increase in total supply	5.3	6.1	7.3
Percentage of increased demand met by non-residents	25	23	23

¹ Components will not necessarily sum to totals because of rounding.

Turning to the income side, the salient features of the year were an increase in labour income of nearly 13 per cent that was one of the largest year-to-year gains since 1951, a 34 per cent rise in farm income resulting from a record western grain crop, and a fractional decline in corporation profits, following increases in this component over the past five successive years.

On the labour supply side a sizeable increase in immigration, and increasing participation rates coupled with a decline in agricultural employment, caused the non-agricultural labour force to increase by 5 per cent. Non-agricultural employment rose by 5½ per cent. The unemployment rate for Canada, at 3.6 per cent in 1966, declined slightly from the 3.9 per cent rate of 1965.

Industrial disputes were also a feature of 1966. Work stoppages resulting from some of these disputes caused a loss of close to five million man-

working days, more than double that of 1965. In response to factors such as the tight employment market and wage demands that were vigorously pressed in various industries, wage rates rose sharply. In contrast to productivity increases for the commercial non-agricultural sector of the economy averaging between 2½ and 3 per cent per annum in recent years, preliminary indications are that productivity gains in 1966 were much reduced. Thus, the sharp increase in wage rates greatly outpaced productivity gains, resulting in a notable rise in unit labour costs.

Price Movements

Aggregate price change as measured by the implicit price index of Gross National Expenditure rose by 4.6 per cent in 1966 as compared with 2.8 per cent in 1965. The following table shows year-to-year changes in the prices of major components of GNP since 1961.

Implicit Price Indexes – Percentage Change from the Preceding Year

	1962	1963	1964	1965	1966
Personal expenditure	1.3	1.5	1.5	1.9	3.5
Non-durable goods	1.1	1.8	1.6	2.0	4.1
Durable goods	- 0.3	0.4	- 1.0	- 0.4	0.0
Total goods	0.8	1.4	1.0	1.4	3.3
Of which: Food	1.9	2.7	1.5	2.8	6.1
Non-food goods	0.3	0.7	0.9	0.8	1.8
Services excluding net expenditure abroad	1.7	1.4	2.4	2.8	3.9
Government expenditure	2.7	4.1	3.2	4.1	6.9
Business gross fixed capital formation	2.8	3.1	4.4	4.3	3.8
New residential construction	2.9	3.4	5.5	4.9	5.0
New non-residential construction	2.2	3.4	4.4	6.1	5.3
New machinery and equipment	3.0	2.6	3.8	2.6	2.1
Exports	3.1	1.2	1.9	1.2	3.3
Imports	4.1	2.9	1.2	0.4	1.8
Gross National Expenditure	1.5	1.8	2.6	2.8	4.6

Viewed in perspective, prices of personal expenditure, government expenditure and exports all showed significantly higher rates of increase in 1966 than in the preceding four years. Price increases for imports, while higher than in 1964 and 1965, were less than in 1962 and 1963 when the price effects of devaluation were evident. In business gross fixed capital formation, the rate of increase was slightly less than in 1964 and 1965, when sales taxes on production machinery and on building materials were increased.

A glance at the components of personal expenditure reveals the strong increases in the price of food. Most of the increase in food prices was shown by meats and dairy products. Meat prices began to move up strongly in the third quarter of 1965, but by the fourth quarter of 1966 the upwards movement had reversed. In services during 1966 there was more of an increase in the price of rents than had been noted in recent years. Prices associated with household services and education showed increases greater than 10 per cent and communication showed little price change. Within durables there were mixed movements. New car prices declined by over 1 per cent while furniture and jewellery rose by

approximately 4 per cent. The increase of 2 per cent in the Ontario Sales Tax in the second quarter had a significant effect on the rise in prices of durables and of non-food goods as a whole.

In 1965, both the wage and material components of construction showed notable increases. In 1966 advances in materials prices were moderate, while wage rates rose by more than in 1965.

The rise in export prices is of interest. In this area price increases were centered in the categories of live animals, food, feed, beverages and tobacco and fabricated materials. Within foodstuffs, significant increases occurred in prices of wheat, meat and preparations, and tobacco. In fabricated materials, newsprint, fertilizer, copper, nickel, and their alloys all showed significant increases. For most of these items the increases in the Canadian export prices reflected world market conditions. Thus the 3½ per cent increase in export prices, coupled with an increase of less than 2 per cent in import prices, indicates an improvement in the Canadian terms of trade. Discounting these price increases, the volume of merchandise exports increased by 15 per cent in 1966 as compared with 5 per cent in 1965.

The Components of Demand

Consumer Expenditure

Total personal expenditure on goods and services reached a level of \$34.8 billion in 1966, an increase of better than 8½ per cent over the preceding year. This rise consisted of increases of 9½ per cent in outlays on non-durable goods, almost 9 per cent in services, and some 4 per cent in durables. A gain of 9½ per cent in personal disposable income permitted not only this level of spending but also a sharp increase in the level of personal saving.

Although all three major components of consumer expenditure shared in the rise, which was the largest percentage increase since 1952, the gain was somewhat unevenly distributed and of a different pattern from that of the two preceding years. In non-durables, the 9½ per cent gain compares with rises of 6½ and 7½ per cent in 1964 and 1965, respectively. (In real terms, the increases were around 5 per cent for each of the three years.) In durables, the 4 per cent rise in 1966 compares with increases of 10½ and 11½ per cent in 1964 and

1965. This gain in durables is the lowest since 1961. In services, the 9 per cent increase matches the gain of 1964 and is about 1 per cent above the rise of 1965.²

The large increase in outlays on non-durable goods was broadly based, although much of this increase represented price rises rather than gains in real terms. For example, food outlays were up by about 7½ per cent in value terms, but only by 1 per cent in real terms; clothing by 6 per cent (value) and 2 per cent (real); and tobacco by 6 per cent (value) and 2½ per cent (real). Increases in outlays on alcoholic beverages and drugs and cosmetics, however, represented significant gains in both real and value terms.

The relatively small increase in outlays on durable goods was attributable mainly to an unchanged level of purchases of new and used cars from the previous year, after increases of 12 to 14½ per cent in the three preceding years. The over-all rise in durables was due to increases of 8 per cent in toys and sporting goods, 7 per cent in furniture, 9½ per cent in home furnishings, and 11 per cent in radios and appliances.

The 9 per cent gain in services was also broadly based. Shelter, accounting for about 40 per cent of the total, rose by 8½ per cent, while 8 per cent increases were registered in total transportation services and medical expenditures.

Personal Expenditure – Percentage Changes

	Year 1962 to year 1963	Year 1963 to year 1964	Year 1964 to year 1965	Year 1965 to year 1966

Total consumer expenditure	6.0	7.9	8.1	8.7

Business Gross Fixed Capital Formation

Capital expenditures in 1966 amounted to \$12.2 billion, 14.7 per cent higher than the previous year. Non-residential construction and machinery and equipment outlays rose by 19.6 and 16.0 per cent respectively, while outlays on new housing advanced by only 2.5 per cent. Within the year 1966, investment in plant and equipment moved from a seasonally adjusted annual rate of \$9.9 billion in the first half of 1966 to \$10.2 billion in the second half.

In 1966, capital expenditures increased over the revised 1965 estimates for all major industrial divisions apart from forestry and construction. In

manufacturing, pulp, primary metals, electrical products, non-metallic minerals, petroleum and coal products, transportation equipment, rubber and foods and beverages industries recorded advances, while the wood, textiles, printing and publishing and chemicals industries registered declines. Mining, electric power, gas and water utilities and transportation industries made pronounced gains. Housing outlays were a significantly lower percentage of business capital spending in 1966, while mining machinery spending was a significantly higher percentage of business capital spending in 1966.

The advent of colour television in Canada in 1966 and work done on a program for satellite communication to provide telephone, live television and other telecommunication services to Canada's far north were instances of some more glamorous expansion projects during 1966.

² The year-to-year changes of the major components of consumer expenditure in both current and constant dollars are depicted in the introductory chart on page ii.

Housing expenditures at \$2.2 billion were little changed from 1965. They rose 5.8 per cent in the first half of 1966 over the latter half of 1965, but fell 9.1 per cent between the first and second halves of 1966. Housing starts dropped from 166.6 to 134.5 thousand; completions climbed from 153.0

to 162.2 thousand; dwellings under construction fell from 119.9 at the beginning of the year to 88.6 thousand at year-end. The following figures suggest that financing difficulties slowed down the pace of home building.

Mortgage Loan Approvals Gross Basis

Dwelling units

	1964	1965	1966	Percentage change 1965-66
Under National Housing Act:				
Central Mortgage and Housing Corporation	29,939	33,942	37,557	10.7
Approved lenders	28,197	25,516	14,566	- 42.9
Sub-totals	58,136	59,458	52,123	- 12.3
Conventional lenders	93,925	90,221	54,489	- 39.6
Totals	152,061	149,679	106,612	- 28.8

Single-detached starts dropped only from 75 to 71 thousand, but apartment starts tumbled from 78 to 52 thousand.

Business capital spending plans for 1967, published in "Private and Public Investment in Canada—Outlook 1967", DBS Catalogue No. 61-205, are unchanged in level over-all from 1966. Manufacturers' capital budgets are markedly lower in such branches as pulp, primary metals, non-metallic minerals, metal fabricating and textiles. The most striking increase is the 1967 construction budget for electric power, gas and water utilities.

Investment in Non-farm Business Inventories

Investment in non-farm business inventories was \$832 million in the year 1966 as compared with \$905 million in 1965. Within the year, however, there were marked differences in the rates of accumulation among the quarters. While there was virtually no change in the rate in the first quarter of 1966, the rate at which the stocks were built up in the second quarter showed a substantial gain, close to \$1.4 billion, partly as a result of a build-up of automobile stocks associated with a sharp drop in new car sales. In the third quarter of 1966, strike effects and because of a drawing down of new car inventories, the rate at which stocks were built up declined to \$0.6 billion. In the fourth quarter the rate of business inventory investment increased only fractionally.

For the year as a whole, investment in inventories at the manufacturing level was the major force contributing to expansion—about 60 per cent the total accumulation in 1966. Moderate increases were recorded in the stocks of wholesale and retail traders.

The major part of the accumulation in manufacturing inventories in 1966 took place in the durable goods-producing industries, about 40 per cent of which was concentrated in transportation industries. In the non-durable goods-producing industries the movement was mixed, leaving on balance a relatively small accumulation. When compared with 1965, the rate of accumulation in 1966 showed opposing changes as between the durable and non-durable goods-producing industries. The rate of increase was higher in non-durable goods industries and was mainly concentrated in the food and in the rubber producing industries. Among durables, while the rate of increase of stocks of transportation industries was significant, the rate of increase of stocks of primary metal, metal fabricating and machinery industries dropped substantially. For manufacturing as a whole the average stock-to-ships ratio for 1966 was higher than the average of 1965.

About 70 per cent of the total increase in the stocks of wholesale traders in 1966 resulted from a general increase in the stocks of durable goods. When compared with 1965, there were opposing changes in the rate of build-up of stocks as between durables and non-durables. The increases in the

stocks of wholesalers were lower in durables and higher in non-durable goods. The average stock-to-sales ratio for the year as a whole was above the average of the current expansion.

A considerable amount of accumulation was concentrated in the holdings of retail traders. While there was a significant increase in the stocks of all non-durable goods, most noticeably in the stocks

of food, modest increases were recorded in the stocks of durable goods. When compared with 1965, the durables were built up at a much reduced rate tempered by a substantial drawing down of stocks of motor vehicle dealers in the third quarter of 1966. The rate of accumulation in non-durables was virtually unchanged between the two years. The average stock-to-sales ratio for the year was above the average of the current expansion.

Exports and Imports of Goods and Services

During 1966 the deficit in Canada's external account declined by \$40 million on a National Accounts basis. This improvement resulted from a rise of \$262 million in the surplus on merchandise trade—as increased export sales outpaced the

climb in import demand—more than offsetting a deterioration of \$222 million in non-merchandise trade. About 85 per cent of the latter can be ascribed to higher deficits in the interest and dividend account and miscellaneous service (business services, government expenditures, etc.) account.

Exports and Imports of Goods and Services — Percentage Change from Preceding Year

1966.....	17.4	14.6	7.8	11.2	15.4	13.6

Trade of Canada export figures for 12 months show a rise of \$1,548 million. Important export gains were made by food, feed, beverages and tobacco—mainly wheat, crude metals and non-metallic minerals, pulp and paper, fabricated metals, machinery and, notably, transportation equipment. Import figures for the 11 months show a rise of \$1,160 million. Machinery required for investment purposes, other equipment and tools such as measuring and laboratory equipment, computers, other office ma-

chinery and equipment and, notably, transportation equipment, highlighted this increase.

An improvement of \$262 million in the merchandise trade surplus between 1965 and 1966 came from a smaller trade deficit with the United States which coupled with an improvement of \$208 million in the surplus with other countries more than offset a drop of \$62 million in the trade surplus with the United Kingdom.

¹ Sub-totals may not add due to rounding.

The Government Sector

Total revenues of all levels of governments combined (excluding inter-government transfers) increased by \$2.4 billion in 1966 to reach a level of \$18.8 billion, or almost 15 per cent above that of 1965. Approximately 30 per cent of this increase resulted from receipts in regard to the Canada and Quebec pension plans. Federal receipts exclusive of the pension plan increased by 8 per cent in 1966 compared with 9½ per cent in 1965, while provincial and municipal receipts increased by over 13 per cent in both 1965 and 1966. Expenditures by the various levels of government were

up more sharply than non-pension plan receipts: at the federal level by 14 per cent in 1966 compared with 6½ per cent in 1965 and at the provincial-municipal level by 15½ per cent in 1966 compared with 13 per cent in 1965. The effect of these various flows was to increase the surplus for all levels of government combined by a marginal \$34 million. This increase was entirely attributable to the receipts from the pension plans, because excluding these the federal surplus was reduced by \$444 million to a surplus of \$124 million, while the combined provincial-municipal deficit was increased by \$236 million reaching a total of \$558 million for the year 1966.

Aside from the surge in receipts resulting from the inception of the Canada and Quebec pension plans in January of 1966, with the exception of revenues from the corporate income tax all components of government revenues increased sharply in 1966, mainly as a result of generally buoyant economic conditions. In addition, higher general retail sales tax rates in Ontario and extended tax bases in Ontario and Quebec reinforced revenue gains from indirect taxes.

Total revenue from direct taxes rose by \$548 million, with almost all the gain arising from personal taxes. The share of the increase going to provincial governments was somewhat greater than that accruing to the federal government because of a further abatement to the provinces of 3 percentage points of basic income tax on January 1, 1966. Indirect taxes for all levels of government increased by some 10½ per cent, in part reflecting the aforementioned increase in rates.

Expenditures on goods and services for all levels of government combined rose by a striking 16½ per cent, with increases at the federal level of 19 per cent and at the provincial-municipal level of 15 per cent. At the federal level 75 per cent of the increase occurred in outlays on non-defence goods and services. Defence expenditures rose by 10 per cent.

Components of Income

Compared with the previous year, labour income in Canada increased by about 12½ per cent in 1966, in spite of the fact that it was a year marked by severe industrial disputes. About half the increase reflected additional employment in the non-agricultural industries, while the balance was due to increased average earnings, mainly from higher wages but in some cases from longer average weekly hours, particularly construction, and more overtime. The increase in the number of persons employed came mainly from school leavers and immigrants but also from an increased percentage of women participating in the labour force. Participation rates for men were virtually unchanged. Unemployment rates on average were slightly lower in 1966 than 1965.

Goods-producing industries accounted for more of the increase in payrolls than did service industries—13 per cent compared with 11 per cent. However, in the latter half of the year the trend was reversed and incomes advanced more quickly in the service industries. The primary industries showed a 7½ per cent increase in labour income in 1966, somewhat less than the average. The largest increase involved mining where most of the rise was in average earnings, due to both higher wage rates and some shift toward the more highly paid sectors, such as iron and petroleum.

Manufacturing, up by 11½ per cent, continued the steady increase noted in 1965, absorbing almost its share of additional employment. The construction

industry continued to expand and was responsible for increased salaries and wages of almost 25 per cent. Part of the increase resulted from a lessening of the seasonal decline associated with that industry and part was a result of greater emphasis on engineering projects where hourly earnings are significantly higher. The average weekly hours worked in the construction industry also increased. Over the year this industry appears to have attracted more than the national average increase in numbers of employees. Average weekly earnings in construction increased by an even higher proportion.

Service-producing industries, responsible for about 58 per cent of wage and salary payments in Canada, had income increases almost as high as the goods-producing industries but with somewhat higher employment gains and less in average weekly earnings. Greatest gains were in the trade and service sections, 11 per cent and 14 per cent respectively. These industries might have attracted more part-time employees, for example, from among students or housewives. Proportionately lower payroll increases were evident in transportation and other public utilities, 8 per cent; these industries being generally less cyclically sensitive, experienced about average increases in earnings. Finance, insurance and real estate also had lower rates of increase, 8½ per cent.

Government employees payrolls increased by more than the average in 1966. Retroactive payments made in 1966, but pertaining to 1965, were partly responsible for the large increase of 15 per cent in federal non-military payments. However, provincial governments also had large payrolls, 13 per cent. In part the rise in government payrolls was due to relatively low increases in the earlier years.

Supplementary labour income substantially increased in 1966 by 23½ per cent, mainly a result of the Canada and Quebec Pension Plans.

Corporation Profits

Corporation profits (before taxes and before dividends paid to non-residents) were \$5.2 billion in 1966, showing virtually no change from the 1965 level. A quarter-to-quarter comparison through the years 1965 and 1966 indicates a rising level of profits in the second and third quarters of 1965, with little change in the two following quarters. Following a decline in the third quarter, profits in the fourth quarter almost regained levels attained in the latter part of 1965.

Profits in the manufacturing group fell by about 2 per cent in 1966. A gain of 25 per cent was recorded by the petroleum and coal industry with relatively smaller gains recorded in the rubber, wood, printing, electrical apparatus, chemical, and miscellaneous categories. On the other hand, the textile and paper industries experienced declines of 24 and 23 per cent respectively. The metal and non-metallic mineral industries both had declines of about 7½ per cent.

Wholesale trade profits advanced by nearly 11 per cent, service trade profits by nearly 16 per cent, and transportation, communication and storage by 9 per cent, while retail trade profits dropped by almost 5 per cent, mining by 5 per cent, and finance, insurance and real estate by nearly 3 per cent.

Other Investment Income

Rent, interest and miscellaneous investment income rose by 10 per cent over 1965, compared to an increase of 9 per cent between 1964 and 1965. Government investment income for all levels combined rose by \$172 million in 1966 with an increase of \$45 million at the federal level and an increase of \$127 million at the provincial-municipal level. Subsidies to the railways in 1966 were higher than in 1965.

Accrued Net Income of Farm Operators

Accrued net income of farm operators increased to \$2,204 million in 1966, 34 per cent over that of the year 1965. Components showed increases over the previous year's totals, the largest gain occurring in grain production. With expenses increasing by less than the rise in cash income, net income advanced by more than cash income. The value of the record 1966 grain crop at \$1,564 million was 20 per cent above the 1965 level and surpassed the previous record of \$1,381 million in 1963 by 13 per cent.

Cash income from the sale of livestock increased by approximately 15 per cent, due mainly to higher prices. Dairy products, partly reflecting much higher federal and provincial dairy subsidies, together with rapeseed and soybeans mainly were responsible for increases in income from other farm products.

Net Income of Non-farm Unincorporated Business

During 1966 net income of non-farm unincorporated business increased to \$2,949 million, 2½ per cent over the 1965 total. The service industries showed small increases but these were partially offset by a decline in manufacturing and retail trade.

Production by Industry

Real Gross Domestic Product less agriculture in 1966 increased by 6½ per cent over 1965. This compares with a gain of 7 per cent for 1965. Most major industry groups continued to rise by more than the post-war average rates of growth. Manufacturing, which advanced more than 7 per cent, accounted for 37 per cent of the increase in non-agricultural real output. Other major industry groupings that contributed significantly to the overall gain were transportation, storage and communication 8 per cent, trade 4½ per cent, and finance, insurance and real estate 5 per cent. Increases over 1965 of 7 per cent, 12½ per cent, and 6½ per cent respectively occurred in construction, electric power and gas utilities and mining.

Fourth Quarter 1966

In the fourth quarter of 1966, Gross National Product advanced by 2.0 per cent from the strike-affected third quarter to reach a level of \$59.1 billion. With prices increasing by 1 per cent, approximately one half of the change in GNP represented a gain in real terms.

The main sources of increased demand in the fourth quarter were consumer spending and business investment in plant and equipment. Personal spending on non-durable goods and on services continued to advance by 2½ and 2 per cent respectively. A one per cent decline in outlays on durable goods, caused entirely by reduced expenditures on new cars, moderated the advance in consumer spending at the aggregate level to 2 per cent. Business spending on plant and machinery advanced by 5½ per cent following a third quarter decline.

Both expenditures by governments on goods and services and outlays on new residential construction showed moderate declines in the fourth quarter. Government purchases showed divergent movements as between the various levels of government, with federal expenditures increasing and provincial-municipal outlays declining, partly because of reduced capital outlays.

Exports of goods and services rose by a moderate 1½ per cent in the fourth quarter, in contrast to the strong 4 per cent third quarter advance. The same pattern was evident in imports of goods and services, wherein the fourth quarter gain of 2½ per cent compared with a third quarter increase of 4½ per cent. Within the merchandise components, there was a gain of 3½ per cent in merchandise imports, that in part reflected an increased pace of domestic investment in machinery and equipment. Merchandise exports increased by 1½ per cent. Payments for services declined fractionally. As a result of these transactions there was a slight widening of the current account deficit on a National Accounts basis.

Turning to the income side, labour income showed a rise of close to 3 per cent, while profits increased by 8 per cent, in part because of irregularly high fourth quarter railway subsidies. The latter were also responsible for the decline in indirect taxes less subsidies.

Price Movements

In the fourth quarter of 1966 the price component of Gross National Product advanced by 1 per cent at a rate slightly less than that of the preceding quarter.

Consumer prices advanced by 0.9 per cent. A notable feature in this sector has been the decline in the rate of increase in food prices throughout the year. In the fourth quarter, food prices showed no change from the level of the third quarter. Prices of consumer goods other than food, which have been showing only fractional increases except for the second quarter of the year when the increase in the Ontario sales tax was effected, advanced by a little over 1 per cent in the fourth quarter. Discounting seasonality, significant price increases were noted in clothing, furniture, household supplies, tobacco, and gas, oil and grease. New car prices also in-

creased from their low third quarter level. This third quarter price decline was accompanied by a high volume of sales, part of which came from existing stocks rather than new production. Service prices continued to advance at a 1 per cent rate.

Capital goods prices rose more in the fourth quarter than in the third in construction largely because of an increase in wage rates. Prices of exports rose by 0.6 per cent compared with an advance of 1.7 per cent in the preceding quarter and import prices rose by about 1 per cent.

¹ The implicit price indexes in some quarters may not provide reasonable measures of price change as a result of marked quarter-to-quarter changes in expenditure patterns. Such was the case notably in the third quarter of 1966. The quarter-to-quarter changes in the table are based on price indexes in which the effect of changes in expenditure patterns has been discounted.

The Components of Demand

Personal expenditure reached a level of \$36.0 billion, seasonally adjusted at annual rates, in the fourth quarter, a further increase of 2 per cent that followed the record 3½ per cent rise in the third quarter. The 2 per cent fourth quarter increase was spread among the major components as follows: a rise of 2½ per cent in non-durable outlays, more than 2 per cent in services and a decline of 1 per cent in durables following a 12½ per cent increase in that component in the preceding quarter.

Personal income advanced by 2.7 per cent, while personal disposable income rose by approximately 2.4 per cent after allowing for a 5 per cent increase in personal taxes. This permitted not only a high level of consumer expenditures but also an increase in personal saving of \$240 million, following a decline of some \$560 million in the third quarter.

Within the durables category, the dominant item, and the one responsible for the decline, was new car purchases which fell some 6 per cent (although purchases of European cars increased by 5½ per cent. Furniture and home furnishings sales were just about unchanged, while purchases of appliances and radios increased by 2 per cent as against 8 per cent in the previous quarter.

Within non-durables outlays on components such as electricity, household supplies and alcoholic beverages showed increases.

Movements among service components were not uniform. Increases of 3 to 3½ per cent were shown in personal care, household operations and shelter, while increases of 1½ per cent occurred in personal services, medical care, and miscellaneous services. Purchased transportation declined by 5 per cent, largely due to the Air Canada strike in November.

Business fixed capital spending, including residential construction, rose by 4.3 per cent from the third to fourth quarter to reach an annual rate of \$12.5 billion after allowance for seasonal factors.

The value of housing put in place dropped 2 per cent. Housing starts fell from 129.9 to 124.9 thousand at annual rates, while completions dropped from 171.9 to 156.3 thousand units. The decline in starts for urban areas was confined to apartment construction.

Business outlays for plant and equipment amounted to an annual rate of \$10.5 billion, 5½ per cent above the third quarter, with structures up 8 per cent, and equipment up 3½ per cent.

The build-up of goods in inventory in the fourth quarter of 1966 continued at a rate slightly higher than that of the previous quarter. Seasonally adjusted estimates show a stock increase of \$580 million at annual rates, compared with \$564 million in the third quarter. The strength in the total accumulation was entirely due to a heavy investment in manufacturing inventories. Investment in wholesale trade inventories was only 13 per cent of the total accumulation, and a significant liquidation occurred in the holdings of retail traders, partly reflecting an increase in demand.

Investment in manufacturers' total stocks owned amounted to \$556 million seasonally adjusted at annual rates. A considerable advance in both the durable and the non-durable goods-producing industries formed the basis for this growth, with the exception of non-metallic mineral products in durables and tobacco, and coke and petroleum in non-durable goods industries, where the stocks were drawn down.

Within wholesale trade, despite a considerable build-up of stocks of almost all the non-durable goods, only a small accumulation took place at the total level, because stocks of durable goods were liquidated. The stock-to-sales ratio for the industry as a whole was lower than the ratio of the previous quarter.

After a marked build-up of stocks in the second quarter, investment in retail channels slackened noticeably in the third quarter, and the current quarter ended with a liquidation of stocks. The liquidation was widespread both among durable and non-durable goods industries. The impact of these depletions was to some extent offset by an increased rate of accumulation in food trades. The stock-to-sales ratio for the industry was higher than the ratio of the previous quarter.

The deficit in the external account on a National Accounts basis widened slightly in the fourth quarter. In this quarter, the change resulted from a drop of \$180 million in the merchandise trade surplus, partly offset by a \$44 million smaller deficit in non-merchandise trade.

Discounting seasonality, fish, newsprint, fertilizers, aluminum, nickel, iron ore, crude petroleum, natural gas, motor vehicles, farm and non-farm machinery made export gains. Wheat clearances, lumber, wood pulp, copper, zinc and asbestos recorded declines. Data are not available to identify import commodity changes corrected for usual seasonal movements.

Improvement in service transactions mainly concentrated in the miscellaneous account (official contributions to abroad declining from their high third quarter level) offsetting a worsening in the interest and dividend account.

Exports and Imports of Goods and Services — Quarter-to-quarter Percentage Change

The Government Sector

Total expenditures of all levels of government combined, excluding inter-governmental transfers, increased by just over 3 per cent in the fourth quarter from the third quarter. However, there were divergent movements in the two levels of government which reflected irregular factors in both the third and fourth quarters. Federal total expenditures increased sharply, by 9 per cent, while provincial-municipal total expenditures declined slightly.

The higher federal outlays occurred mainly in expenditures on goods and services and subsidies. The major portion of the gain in goods and services was centered in defence expenditures, about half of which resulted from pay increases to members of the armed forces. The increase in subsidies was caused by irregularly large interim payments made to the railways in the fourth quarter.

At the provincial-municipal level, expenditures on goods and services declined by 4 per cent from an unusually high third quarter rate and were largely due to lower capital outlays. This decline more than offset a sharp increase in transfer payments, mainly higher grants to hospitals and welfare-type institutions, at the provincial level.

Total revenues of all levels of government combined increased by 2½ per cent during the quarter, somewhat less than the increase in expenditures. A large part of the gain accrued in taxation revenue, particularly from personal direct taxes, and reflected continuing high levels of employment and incomes. At the federal level there was a notable increase in investment income which was associated with the large interim payments made to railways.

With expenditures rising more rapidly than revenues during the quarter, a deficit on a National Accounts basis of \$52 million at annual rates was registered for all governments combined. The federal government moved from a surplus of \$164 million in the third quarter to a deficit of \$364 million. At the provincial-municipal level, the deficit narrowed by about \$400 million from an unusually high rate in the third quarter.

The Components of Income

Seasonally adjusted labour income in the fourth quarter of 1966 increased from the third quarter by 3 per cent. This increase was somewhat exaggerated by the fact that there were substantial industrial disputes in the third quarter and relatively few in the fourth quarter. Both periods were inflated by large retroactive wage and salary payments. If the effect of industrial disputes and retroactive adjustments were eliminated, labour income would have increased by about 2 per cent in the fourth quarter, roughly continuing the upward trend of the previous six months, though apparently at a slightly reduced pace from that shown in the fourth quarter 1965 and the first quarter of 1966.

The continued upward trend in wages and salaries was generated in all industries except agriculture, fishing and trapping. There appeared to be less of a rise in manufacturing than was noted in the previous quarter.

Construction industry wages and salaries increased 3½ per cent reflecting a partial recovery from the third quarter. Incomes in transportation and public utilities, although 7 per cent higher than in the third quarter, were affected by both labour disputes and retroactive wage payments, submerging any normal trend. Government wage and salary payments in the fourth quarter equalled those of the third quarter in spite of the retroactive payments made in the third quarter. Discounting these, payments increased by about 3 per cent. Trade, finance and service industries all appeared to continue the increases indicated for the last six months.

Fourth quarter corporation profits rose to a seasonally adjusted annual rate of \$5,288 million, about 8 per cent above the third quarter level. A large part of this increase in the fourth quarter resulted from railway subsidy payments.

Total manufacturing profits rose by 9 per cent over the third quarter, but a mixed picture of increases and decreases was experienced within this group. Substantial gains were made by the paper, metal, electrical apparatus, and petroleum and coal industries but offsetting declines developed in the textile, rubber, non-metallic mineral and chemical industries.

Advances in profits were recorded in the transportation, storage and communication, electric power, gas and water, wholesale trade, service, and finance, insurance and real estate industries.

Retail trade profits dropped somewhat from the third to the fourth quarter of 1966, and mining also fell 15½ per cent.

Rent, interest and miscellaneous investment income rose by \$252 million or 6½ per cent from the level of the third quarter, on a seasonally adjusted basis. Government investment income was up by \$124 million, following a decline of \$108 million in the third quarter. Of the \$124 million increase, \$72 million reflected higher trading profits of government enterprises, in part associated with irregularly high railway subsidies in the fourth quarter.

Accrued net income of farm operators, seasonally adjusted at annual rates, was down about 5 per cent from the third to the fourth quarter of 1966. Income from grain production declined sharply, but this was partly offset by small increases in live-stock production and income from the sale of dairy products.

Net income of non-farm unincorporated business was virtually unchanged from the third quarter level, with retail trade and services, the major industries, showing only marginal increases.

Production by Industry

Real Gross Domestic Product at factor cost, less agriculture, increased by 2 per cent between the third and fourth quarters of 1966.

Manufacturing, which advanced $1\frac{1}{2}$ per cent, accounted for 26 per cent of the gain in the non-agricultural real output. Approximately 60 per cent of the advance in manufacturing was in durables, which rose by almost 2 per cent, while non-durables increased by more than 1 per cent.

Almost all the rise in durables manufacturing was the result of increased production of electrical apparatus and supplies and transportation equipment. The increase in the manufacture of non-durables was largely concentrated in textile products and total food products.

Increasing by $4\frac{1}{2}$ per cent, transportation, storage and communication accounted for 24 per cent of the total gain in non-agricultural real output. More than three quarters of this increase was recorded for transportation and almost one quarter for communication. Within transportation a strong recovery in railways from the strike-affected third

quarter was partly offset by declines in air transport and stevedoring both of which were affected by strikes in the fourth quarter.

Wholesale and retail trade rose by almost 2 per cent, contributing $12\frac{1}{2}$ per cent to the fourth quarter increase. Of the total rise in trade, only 3 per cent was attributed to wholesale trade.

Mining, which rose by $4\frac{1}{2}$ per cent, contributed $14\frac{1}{2}$ per cent to the total gain in output. This rise was sparked by iron ore and crude petroleum.

Finance, insurance and real estate was another of the major industries that contributed to the increase.

Technical Note

The Balance of Payments Division revised data for 1964 and 1965 in the second quarter of 1966. The revised figures are shown in the "Quarterly Estimates of the Canadian Balance of International Payments", DBS 67-001, starting with their report for the second quarter of 1966. These revisions have not been incorporated in the national accounts. However, the correct relationships between accounting periods were maintained by introducing adjusting entries.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force rose somewhat in February. The unemployment rate was 3.8 per cent.

EXPORTS AND IMPORTS (More detail in Tables 91 and 92)

Total exports were higher in January especially on the strength of higher values recorded by United Kingdom and "all other countries". Total imports rose slightly more than 5 per cent in January with the increases in imports from United Kingdom and "all other countries" more than compensating for the drop registered from the United States.

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

Rail revenue freight loaded, in February, reverses its previous gain with a 7 per cent drop.

Value of cheques cashed in clearing centres reached a new high in January following the sharp decline in December.

Consumer credit expansion continued in December.

manufacturing, all industries					rail revenue freight loaded	cheques cashed in clearing centres	consumer credit outstanding ¹ (end of month)

¹Total of all series available monthly as in column 10, Table 90.

SELECTED QUARTERLY SERIES (More detail in Tables 7, 11, 69, 70, 71, 75, 90 and 104)

Gross National Product advanced by 2.0 per cent in the fourth quarter from the strike-affected third quarter to reach a level of \$59.1 billion. With prices increasing by 1 per cent, approximately one-half of the change represented a gain in real terms.

		gross national product at market prices		personal disposable income	corporation profits before taxes ² (annual rates)	farm cash ⁴ receipts	consumer credit outstanding ³ (end of quarter)	dwelling units, all centres

¹Gross National Product at market prices excluding accrued net income of farm operators from farm production. ²Before dividends paid to non-residents; see also footnotes on Table 113. ³Total of all monthly and quarterly series as in column 14, Table 90. ⁴Seasonally adjusted figures for this series do not incorporate revisions to the original data in table 75.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The index of thirty industrial materials rose a little in February, thus interrupting the downward trend prevailing since last May. The index of industrial common stocks increased for the fourth consecutive month in February. The consumer price index edged up to 146.1 in February despite the 0.6 per cent decline in the food component.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Figures for births, marriages and deaths for 1966 and 1967 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. Source: Labour Force Bulletin, (71-001), D.B.S.

¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹The unemployed as a percentage of the labour force for each region. Due to weighting differences, a simple average of the regional rates will not give the seasonally adjusted Canada rate on page S-1, nor the unadjusted Canada rate in table 19.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service.

¹The data for the current year are subject to revision. ²Includes gold. ³Consists of general wholesale index less animal products and vegetable products component groups. ⁴Consists of iron products and non-ferrous metals products component groups less gold. ⁵These two series comprise the general wholesale index. ⁶Excludes gold. Source: Prices and Price Indexes (62-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D.B.S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), D. B. S.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 5,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

¹Monthly totals are not equivalent to annual data which include Newfoundland and Yukon and Northwest Territories for which only annual statistics are collected.

²Planks and boards, flooring and square timber.

³Hollow blocks including fireproofing and load-bearing tile.

⁴For building insulation only.

⁵Figures cover the production of firms which normally account for 90 per cent of the total for Canada.

⁶Factory sales of firms which normally account for 96% of total Canadian production.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.³Many mills were operating at more than the standard 26 working days in the month.⁴Includes solid, coated, bulk, packages and novelties.⁵Includes beef stews and boiled dinners.⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Monthly averages for 1964 and 1965 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ³Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada.

⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

List of Statistical Tables.....	Inside Back Cover

A NOTE TO USERS

MODIFICATION IN TABLE 26: ACTIVITIES OF THE UNEMPLOYMENT INSURANCE COMMISSION:

The four series relating to national employment service in Table 26 are temporarily suspended commencing with this issue and consequently the format of the table has been changed.

The re-organization of manpower activities under the Department of Manpower and Immigration has led to a number of administrative changes which have altered the significance of statistics pertaining to those series. The result is that valid comparisons with previous periods are no longer possible on the basis of these statistics.

New statistical series are being developed to give more significant information about people using the services of Canada Manpower centres.

RETAIL TRADE STATISTICS:

The unadjusted and seasonally adjusted data on Retail Trade by store types and provinces in Table 85 and the adjusted data on Page S-5 have been revised starting with January 1961 according to the 1960 Standard Industrial Classification.

In addition, data are now provided separately for each of the provinces in the Atlantic region.

The seasonally adjusted data now presented have been adjusted by the X-11 variant of the United States Bureau of the Census, Method II program.

Copies of the revised data for the period not covered by the Review are available on request.

INVENTORIES, SHIPMENTS AND ORDERS IN MANUFACTURING INDUSTRIES:

The unadjusted and seasonally adjusted data on total manufacturing inventories, shipments and orders in Table 45 and the seasonally adjusted figures on Page

S-8 are revised commencing with January 1962. The original data on manufacturing shipments by industry (Table 40) and on inventories by industry (Table 41) are also changed from 1962 onwards.

A number of factors contributed to the change in the revised figures. Actual values of the 1962, 1963 and 1964 Census of Manufactures are now used for these years and the 1964 census values have been used as the base values for the following years. The data for 1965 and 1966 have been adjusted to include reported values too late to be included in original estimates.

The revisions of the above series for the period not covered by the Review will be contained in the DBS report "Inventories, Shipments and Orders in Manufacturing Industries", Catalogue No. 31-001, December issue.

VALUE OF BUILDING PERMITS:

The seasonally adjusted data on building permits by types in Table 67 and Page S-6 are modified starting with January 1965.

EXPORT-IMPORT SERIES:

The seasonally adjusted data on exports and imports by major countries on Page S-7 and Tables 91 and 92 are revised for the entire period from January 1946.

The data now published have been adjusted by the X-11 variant of the United States Bureau of the Census, Method II program. The complete revised historical record on the new basis has been published in the Weekly Supplement to the Review, Catalogue No. 11-004, DBS, April 19 issue.

OTHER REVISIONS:

The quarterly adjusted data on commercial failures on Page S-9 have been revised from 1965.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2400-501

PROBLEMS IN MEASURING QUALITY CHANGES IN PRICE INDEXES¹

Changes in the "qualities" of commodities and services priced for index purposes is a most critical factor in production of an adequate system of price indexes in Canada. For measurement of price changes over time, it is essential that prices used in the comparison relate to the identical or comparable unit of commodity or service over the period of comparison. The same is true for measurement of differences in prices among locations. It is a well known feature of our market economy, however, that existing products are continually being altered, old products are disappearing from the market and new ones are being introduced. Under these conditions, it is not possible to obtain market prices over an extended period for a group (basket) of unchanged commodities and services which is sufficiently representative of purchases and sales in the economy. For continuance of the index, prices of changed items and of substitute items must be used. However, such prices must be adjusted before use to eliminate that portion of the apparent price difference which is attributable to the differences in "qualities" between the items formerly priced and the changed or substitute items currently priced.²

Changes in quality are usually identified with changes in the physical characteristics of commodities and changes in the conditions of their purchase or sale, the latter including services associated with the exchange of the physical good. Changes in the quality of service items are less readily identifiable, largely because the modifications to services are not discernible in the form of changed physical attributes. **Identification** of changed quality is the necessary first step in preventing such change from directly causing movement of a price index. **Measurement** of the change in quality is the second essential step and brings into focus the need for a definition of "quality" and the problems of quantifying or measuring it.

In considering the definition of quality for price index purposes, it is of little help to say that the objective in producing price indexes is to measure pure price change from period to period. Such an objective has meaning only in the context of the uses which the index is designed to serve. For example, a principal use of price indexes is the decomposition of changes in value aggregates, e.g., industrial production or consumer expenditure, into changes in price and changes in volume, the latter

representing changes in "real" output or "real" consumption, in which changes in the qualities of goods and services produced or consumed are counted as elements of change in output or consumption. For this use, the concept and statistical definition of quality appropriate to real output and consumption should be adopted for price index purposes. Another principal use of price indexes is in the analysis of inflationary and deflationary pressures in the economy and more generally in the analysis of the pricing system as a rationing mechanism. In this use, the concept of "utility" and the need for a welfare index reflecting the impact of price change on the cost of purchasing a constant level of living has been intensively probed.³ Does it follow that because production activity at various stages toward final goods and services is only a means to consumption, utility is correspondingly appropriate as a concept of the qualities of the countable numbers of units of inputs and outputs observable in the economic process? If one accepts the concept of "utility" as the ultimate determinant of worth, then quality may be defined in terms of utility in a fundamental sense. Such a definition, however, is of small comfort to the practising statistician who is left with the so far intractable problem of devising operationally feasible methods, and securing prerequisite data, for measurement of the theoretical concept.

At present practices in measurement of quality changes in goods and services priced for index purposes and the consequent adjustment of indexes are basically conventions in which utility is an indirect and hazy guidepost. Direct measurement of changes in quality of items priced is confined generally to comparisons between closely related substitutes, i.e., items within a class for which a fixed weight is used in the index.

Direct substitution and measurement is undertaken when (1) a variety (specification) priced becomes no longer representative of the movement of its class even though still available in the market, and (2) the variety priced is altered by the producer and the former variety is no longer available in the market, e.g., when the annual changes in automobile models occur.

New products for which the substitution effect is not confined primarily within a weight class, e.g., television, which is a substitute for many weight classes in the broad component of recreation and reading in the Consumer Price Index, are introduced into the index by linking and an accompanying appropriate revision of weights among classes. Such introduction of new products is a limited application of the more comprehensive major revision of content and weighting diagrams of price indexes. In the

¹ This article is based on a paper presented by Mr. A.D. Holmes, Director of the Prices Division, to the Sixth Conference of Commonwealth Statisticians held in Ottawa, September 19-30, 1966.

major revisions of indexes, no attempt is made to assess the comparability of the old and new "basket" of goods and services in terms of the relative quantity and quality aggregate represented in each. Yet the indexes relating to each period are linked to form an index measuring price movements over the combined periods. Without assessment of the quantity and quality comparison of the two index baskets, it is difficult to interpret the meaning of the historical series and to assess the validity of particular uses of it. This aspect of measurement of quality change in price index construction may become of much more significance as indexes become the tools for escalation of contracts running over increasingly longer periods of time, e.g., pension plans. While this problem of changes in the product mix and aggregate has been traditionally classed as a problem in quality change, it is inextricably involved in the more limited but utility-oriented comparisons of closely related substitute products. It is not clear that segregation of the quality change and product mix problems should be as rigid in discussions of price statistics as they appear to have been in the past.

Identification of quality change is an increasingly difficult problem. Prices are collected for narrowly specified goods and services. Written specifications, however, cannot in practice be fine enough to uniquely identify the transactions, without imposing a too heavy burden on the respondent. In continuing collection of prices for each specification, a critical responsibility remains with the price respondent and ultimately with the price compiler for ensuring that prices reported are transaction prices rather than list prices, that they relate to the specification agreed upon, and that no change has occurred in circumstances associated with the transaction which would destroy the comparability of the prices reported in successive periods. To discharge that responsibility effectively, the price compiler requires an updated, reasonably comprehensive system of commodity and market intelligence, including knowledge of the "pricing" practices of respondents. Also, he must establish a sufficiently effective rapport with respondents that reporting errors arising from misunderstanding of purpose and concept can be minimized and doubtful reports quickly probed and confirmed or revised. In a marketing environment in which price competition frequently takes the form of changes in discounts and other types of concessions, and in which frequent promotional selling utilizes a variety of forms of concessions and "extras" which are not reflected in what appears on the surface to be "price", the problems of defining price and of identifying reporting misconceptions and quality changes are very closely interwoven.

Quality change is primarily identified by changes in physical attributes of products, the size, number of units and location involved in the transaction, and the services accompanying the sale. The identification problem respecting physical attributes ranges from the readily obvious situations, e.g., new structures such as houses, apartments and manufacturing

plants, most forms of machinery and equipment, and other complex products, through the far from obvious, gradual and often hidden modifications in quantities and qualities of materials and techniques of joining related parts, e.g., in furniture and clothing, to the simple but easily overlooked changes in quantity, e.g., sizes or net weights of packages, jars and other containers. Changes in services accompanying transactions priced are seldom obvious because they are not physically self-evident, tend to be gradual, and are not publicized except as generalities. Again, effective, timely identification is dependent on maintenance of a selective, systematic programme of commodity and market intelligence within the price survey agency and development of adequate understanding and co-operation of price respondents.

Methods of measuring changes in quality are aimed at estimating the price equivalent of the quality difference. Generally, the measurement leads to an expression of the relative qualities of the replacement item and the replaced item, rather than of the absolute quality differential. Methods may be summarized in the following categories:

- (1) Comparison of relative prices of two substitutes, i.e., closely related varieties or models, in the market at the same point in time.
- (2) Comparison of input costs of producing or supplying the two substitutes:
 - (a) Input cost of extras only.
 - (b) Input cost of labour and materials.
 - (c) Total input costs.
- (3) For complex goods, the problem of quality change is minimized, if not avoided, by:
 - (a) Pricing of relatively homogeneous components which are combined with fixed weights.
 - (b) Pricing of models.

In adjusting indexes for the changed qualities of items in them, extensive use has been and is being made of observable relative prices of closely related substitutes. Obviously, substitutes must be priceable in the market at one or more common points in time. Relative prices of substitutes do vary over time in response to changing demand and supply conditions, however, and a choice among possible overlapping pricing periods is necessary and does affect the consequent implicit estimate of relative qualities. In practice, paired overlap prices are available over only a short period of two or three months at best. The introduction of substitutes into the index is delayed until the replacement variety has become sufficiently established in the market yet the variety to be replaced has not declined so far that the price relationship between them may be abnormal. At such a stage, the demand and supply situation of the paired substitutes should be fairly similar, e.g., respecting scale of production, supply of factor inputs and volume of marketings. In short, relative prices should not be distorted by transitory, rapidly changing circumstance. Where such evolutionary, in contrast to revolutionary, conditions do not prevail, relative prices are judged to be dubious

indicators of relative qualities for price index purposes and other methods are employed. However, all methods which use, directly or indirectly, relative market prices as basic ingredients of quality comparisons are confronted with the problem of the choice of period of comparison and the probable differences in results among periods.

A principal alternative to relative market prices is comparison of inputs, in terms of either quantities or costs. The comparison of inputs may be preferred where production and marketing conditions lead one to doubt the validity of the simpler acceptance of relative prices and is essential where overlapping prices are not observable in the market. The latter is the predominating factor for a wide range of commodities such as consumer durables, automobiles, and other machinery and equipment in which periodic introduction of new models is accompanied by complete cessation of production of former models. The essence of the method is to estimate either what would have been the price of the old model now had it been currently produced or what would have been the price of the new model had it been produced in the earlier period. The simplest version of the general method may be illustrated by reference to automobiles in which this year's models usually include as standard equipment, equipment which last year was available as "extras", either replacements for last year's standard, e.g., higher horsepower engines and alternative transmissions, and power-assisted steering and brakes, or additional features such as outside rear view mirrors and safety seat belts. Since there are producer prices associated with such extras, it is fairly easy to adjust the last year's model price to one much more comparable to that of the current year. Model changes not identifiable as as extras would still distort the price comparison, however, and extras which may become standard may not be identical between the two periods. This simple version of the input-content method has been largely replaced by a more intensive probing of all input costs and quantities.

The more intensive probing of inputs was introduced in the mid 1950's with initiation of development of an industry-classified system of price indexes and expansion of primary price surveys of manufacturing industries.⁴ The particular technique that evolved required three types of information from producers, viz, (1) the money costs of labour and materials per unit of output for unchanged components and separately for deleted and added components of the old model (A) and the new model (B) in their respective time periods, t_0 and t_1 , and (2) the percentage by which A's money costs of labour and material would be altered if it were produced under the same technology as that used for B in time t_1 , and finally (3) the selling prices of A and B in their respective time periods. The data so obtained were then used as follows. First, the labour and material

costs of A were adjusted by the percentage effect on them of the changed technology, e.g., the substitution of capital equipment for labour and changes in the efficiency of the productive process. Second, the price change in inputs between t_0 and t_1 was estimated using the ratio between the adjusted dollar values of labour and material in the unchanged components of A and B, and the input costs of all components were adjusted to t_0 prices using that ratio. By these two stages, the process yielded constant dollar costs of labour and material in A and B under conditions of a common technology of production. The ratio of these costs is deemed to reflect the ratio of the qualities of A and B, i.e.,

Quality of B = Input costs of B in t_0 prices and t_1 technology

Quality of A = Input costs of A in t_0 prices and t_1 technology

Third, the quality ratio of B to A was then applied to A's selling price in t_0 to estimate the hypothetical selling price of B in time t_0 . The estimated price change from t_0 to t_1 is then based on comparison between the hypothetical price of B in t_0 and the reported price of B in t_1 . In short, product B is linked (spliced) into the index in t_0 using its hypothetical price derived in the above fashion.

Experience with the input-quantity approach has revealed unsolved data problems and is leading to refinements and experiments with alternatives. The method requires cost data which if not readily available imposes considerable burden on respondents and which respondents may be reluctant to reveal. Also, the extent to which "overhead" costs (including capital costs) are taken into account by adjustment to a common technology is currently under debate and extension of the method and data requirement to include such overheads directly is in the experimental stage.

In certain areas of pricing, particularly capital investment expenditures, objects to be priced are unique or so complex in the combination of components that the securing of data essential to input costing is impractical and the relatively simple aggregating of components in any event is inadequate to reflect the quality of the combination. Obvious examples would include buildings and structures such as houses, apartments, industrial plants, bridges and highways, and complex machinery and equipment such as turbo-generators, electrical control equipment, aircraft, ships, and other heavy power machines. At the same time, such examples differ only in degree from other commodities for which the limited input-quantity method is being employed to measure relative qualities and calculate comparable prices. No specific degree of complexity can be named in decisions to attempt quality evaluation and gradual inroads are being made into the area of unpriced end-products of construction and other unique-type products.

In Canada, end-product price indexes for houses and other buildings are not produced. Only price indexes of residential and non-residential building materials are available officially. Nevertheless, in

⁴ "Industry Selling Price Indexes, 1956-59", Dominion Bureau of Statistics, (Catalogue No. 62-515), Jan. 1961.

the absence of the end-product index, users are employing the limited input price measures in combination with wage rate indexes to approximate the price movements of buildings. The validity of their use as substitutes for end-product price indexes is primarily dependent on there being little or no changes in productivity and profit rates in construction over the period of concern.

However, end-product price indexes for highway construction have been developed recently, utilizing bid prices in contracts awarded by provincial governments.⁵ The contract form requires the contracting parties to estimate specific quantities and dollar values of units of highway work to be "put in place", e.g., cubic yards of excavation or fill, tons of graveling, and tons of hot-mix bituminous paving. Technological changes in completing such units or components of highway construction thus directly affect the derived prices employed in the indexes. A fixed basket or programme of units to be put in place constitutes the weighting diagram for a base-weighted index. A current-weighted index is produced also since necessary weights are conveniently available in the contracts. For derivation of comparable prices from year to year, contracts are classified into

⁵ "Price Indexes of Highway Construction in Canada", Dominion Bureau of Statistics (Catalogue No. 62-520). Sept. 1962.

homogeneous price groups for each type of unit of work unit according to contract characteristics, such as size and location, with which differences in price per work unit were found on analysis to be related.

Very recently, in connection with development of price indexes of the costs of constructing and equipping electrical generating facilities, attempts to extend the input-quantity comparison of quality to turbo-generators and other complex equipment, have led to the pricing of models. Most respondents, with whom were discussed the objectives and data needs for a total-input approach, favoured their reporting annually a hypothetical price of a model typical of their own production, as opposed to providing data in a base period on the details of inputs and reporting in subsequent periods on the effect on costs of changes in productivity and profit rates. The effectiveness of model pricing in approximating a market price and in representing the movement of prices of products actually produced will depend primarily on the respondent, as would the input cost alternative proposed to him.

In the absence of acceptable theoretical and operationally feasible definitions of quality, the choice among conventional methods of comparing qualities, and the development of new devices, must be dependent on practical guideposts which lead the way to the inevitable compromises involving feasibility, costs and benefits.

RECENT CHANGES IN THE ORGANIZATION OF THE DOMINION BUREAU OF STATISTICS

A reorganization of the Dominion Bureau of Statistics, which had been under consideration for some months, was put into effect in January of this year.

The increasing complexity and rapid expansion of activities of the Dominion Bureau of Statistics, with the resulting problems of co-ordination made it necessary to group fourteen subject-matter areas which hitherto had been reporting direct to the Dominion Statistician into four branches. Three of these branches, the Economic Accounts Branch, the Financial Statistics Branch, and the Economic Statistics Branch, are headed by a Director General, while the fourth, the Socio-Economic Statistics Branch is headed by the Assistant Dominion Statistician formerly in charge of general assignments. In addition, a new Operations and Systems Development Branch has been created with responsibility for data processing operations and systems development and co-ordination with other operations. The new arrangement is designed to provide more effective direction and communication between the Dominion Statistician, executive management and subject-matter and service divisions, and should result in improved and more efficient service to the government and the public.

At the same time, the Corporations and Labour Unions Returns Act Administration, formerly a separate organization under the jurisdiction of the Dominion Statistician now becomes a division of the Financial Statistics Branch of the Bureau.

Under the new organization, the Assistant Dominion Statistician (Integration and Development), Dr. Simon A. Goldberg, will be responsible for the integration of the whole range of economics and social statistics; in the light of users' requirements, the overall improvement and development of the statistical information covering the wide range of subjects encompassed by the Dominion Bureau of Statistics; Bureau-wide programs of research and analytical studies; the development of sampling and other up-to-date statistical methodology and promoting their application throughout DBS; co-ordination of interbranch statistical programs; guiding the co-ordination of interdivisional statistical activities and their integration with programs of other government departments; and assisting the Dominion Statistician in the formulation of policy.

The Socio-Economic Statistics Branch under the direction of Mr. Lorne E. Rowebottom, Assistant Dominion Statistician, is responsible for the decennial and quinquennial censuses of population and agriculture; statistics of elementary, secondary, higher and adult education, vocational training and school finance; statistics of agriculture; health and vital statistics; judicial statistics. The Branch is also responsible for the field operations of DBS, including the labour force survey, and to provide provincial liaison and consultative services.

The Director General of the Economic Accounts Branch is Mr. C. Douglas Blyth who is responsible for the assembly and analysis of statistics within

an overall national accounting framework; statistics of the Canadian balance of international payments and the international indebtedness, and international travel; indexes of Real Domestic Product by industry, including the Index of Industrial Production; aggregate and detailed industry productivity statistics; the Canadian Statistical Review; the development of a Bureau-wide program of seasonal adjustment; and the establishment and maintenance of data banks of economic time series.

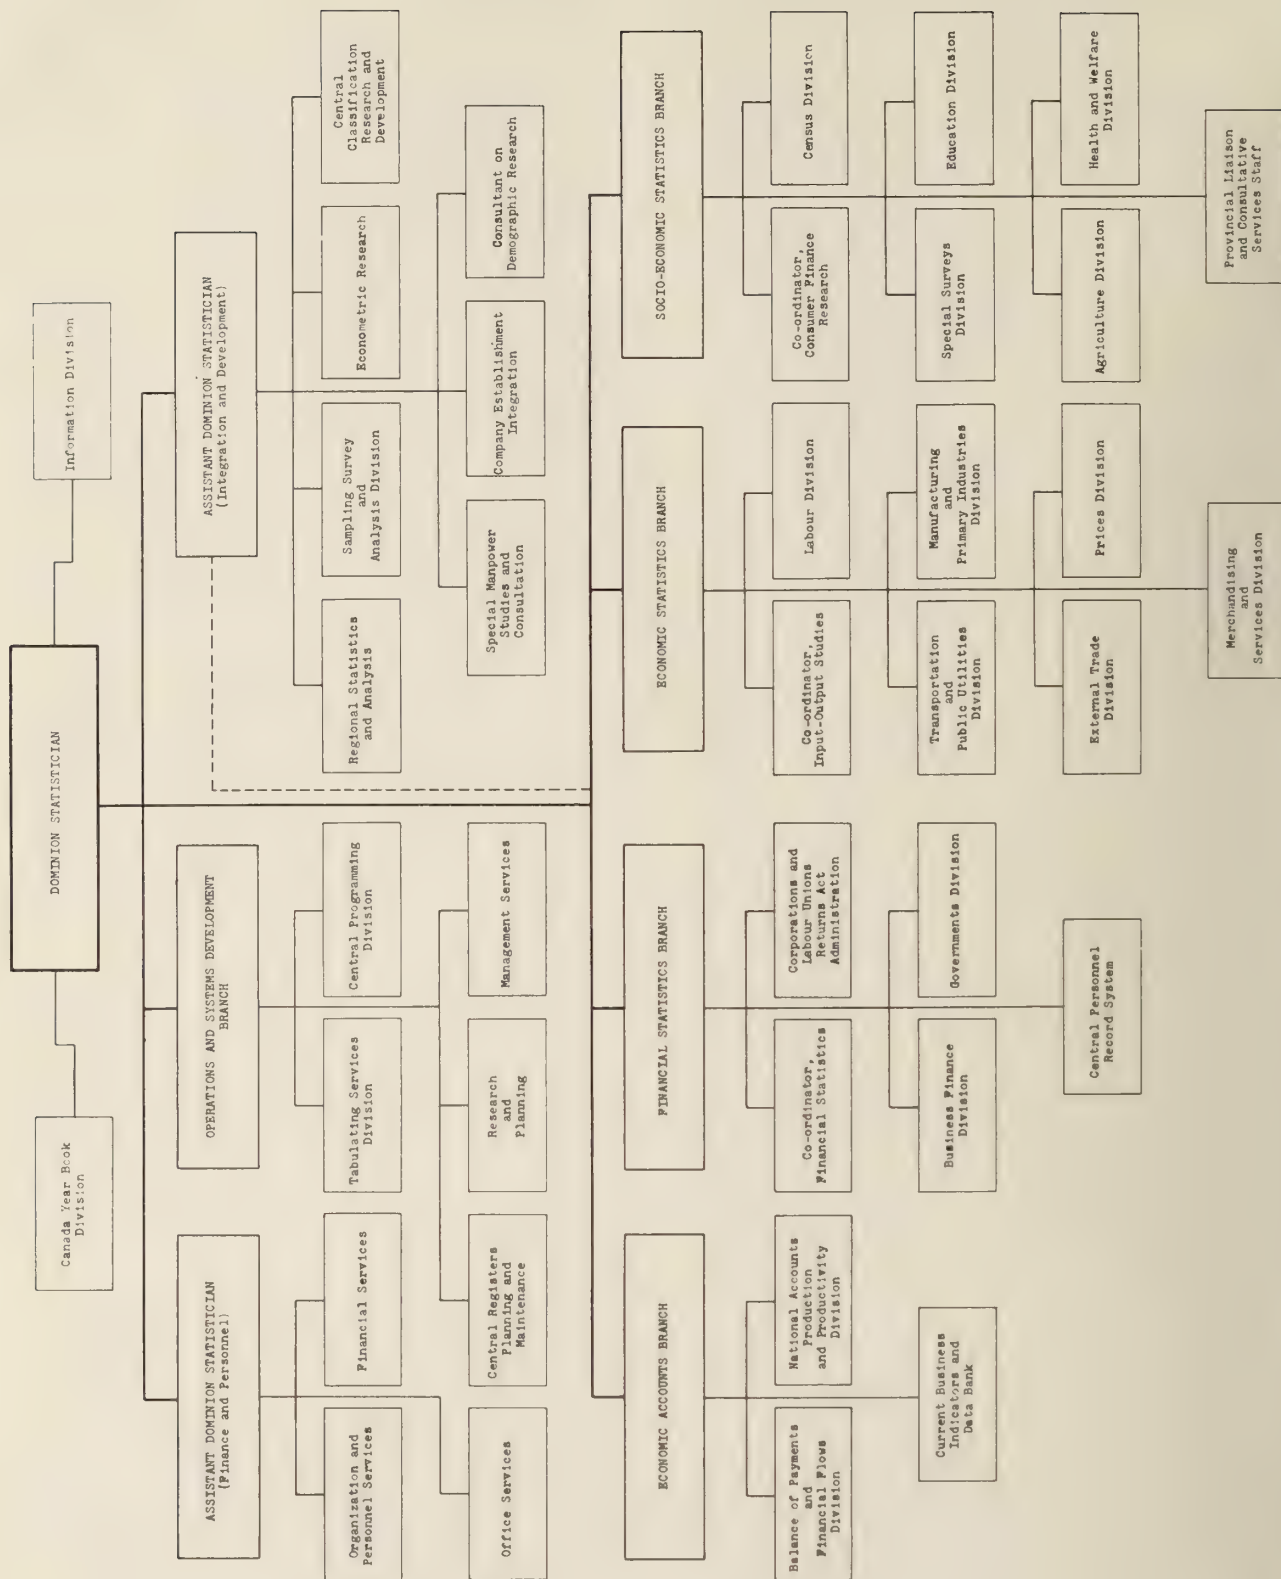

Mr. George A. Wagdin is the Director General of the Financial Statistics Branch and is responsible for estimates of gross capital formation, construction, corporation profits and other related financial data, expenditures in the research-development field, financial statistics, including revenue and expenditures and assets and liabilities of federal, provincial and municipal governments and government business enterprises. This Branch is also responsible for planning, developing and implementing statistical programs required by the Corporations and Labour Unions Returns Act, as well as the Central Personnel Record System of the Public Service of Canada.

The Economic Statistics Branch under the direction of Mr. Vincent R. Berlinguette, the Director General, is responsible for statistics of primary and manufacturing industries, including energy fields; motor vehicle, air, rail and water transportation; employment, earnings and hours worked; pension plans; labour income; public utilities; Canada's foreign trade; retail, wholesale and service trades; prices and family expenditures; as well as current statistics for emergency supply planning, Unemployment Insurance Commission statistics and input-output studies.

The Operations and Systems Development Branch, with Mr. L. Allen Shackleton, the Director General, is responsible for the utilization of resources in developing and maintaining programs for efficient data processing and operational methods throughout the Bureau; synchronizing the utilization of computer and other processing facilities with divisional operations; long term planning of computer and related requirements including data storage and retrieval.

Mr. H. Lyons Allen, Assistant Dominion Statistician (Finance and Personnel) is in charge of the internal administration of the Bureau and the external relations which this involves; the development and application of co-ordinated systems for financial and manpower reporting required by DBS management and by control agencies; development and co-ordination of training, and career planning programs for DBS personnel; assisting in the development of DBS general policy, particularly in budgetary and manpower resource deployment.

The two remaining divisions, the Information Division and the Canada Yearbook, Handbook and Library Division, remain under the direction of the Dominion Statistician.

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 28)

Employment moved appreciably higher in January in most selected industry groups. The largest gains were in construction (3.5%), trade (2.7%), transportation (1.9%) and services (1.5%).

INCOME, EARNINGS AND HOURS (More detail in Tables 18, 34 and 35)

Total labour income increased further in January.

Average hourly earnings were higher in January in both durable and non-durable manufacturing following the declines in December; the average workweek in total manufacturing was slightly longer in the period.

		total labour income	wages and salaries in manufacturing	average hourly earnings in manufacturing			average weekly hours in manufacturing ¹

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Total value of building permits declined slightly in February as a result of a downward movement in the non-residential sector offset partly by a gain in the residential component.

Housing starts picked up considerably in March following the low level of the previous four months; completions, however, dropped irregularly in the period.

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

Manufacturing orders, in December, were noticeably above the level of the previous month while shipments and inventories showed little change.

Value of cheques cashed in clearing centres experienced a 5.4 per cent drop in February.

Consumer credit continued its upward trend in January.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The index of thirty industrial materials resumed its downward trend in March following an interruption in the previous month.
The index of industrial common stocks experienced a fifth straight month of increase in March.
The consumer price index advanced by 0.3 per cent to 146.5 at the beginning of March as all components except food showed increases.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. Source: Employment, Average Weekly Wages and Salaries, (72-002), D.B.S.

¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

end of year or month	total inventories owned	non-durable goods	durable goods	food and beverage	tobacco products	rubber	leather	textile	knitting mills	clothing	wood

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D. B. S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D. B. S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D.B.S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.³Many mills were operating at more than the standard 26 working days in the month.⁴Includes solid, coated, bulk, packages and novelties.⁵Includes beef stews and boiled dinners.⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments. ²Expenditures for administration applicable to the Treasury Board have not been transferred from Finance. Under the Technical and Vocational Training Assistance Act. ³Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁴Includes treatment and rehabilitation services.

A NOTE TO USERS

Modification and Revisions:

Table 75 on "Farm Cash Receipts" by source has been changed to provide more detail and to correspond more closely with the published material contained in the DBS publication "Farm Cash Receipts", Catalogue No. 21-001. The modifications in the new format coincide with revisions to the data for the years 1963 onwards. The series on a provincial basis in Table 76 are also revised commencing with the first quarter of 1963.

Revised data for the period not covered by the Review are provided in the publication mentioned above.

Industrial Production:

The unadjusted data on the Index of Industrial Production in Table 16 and its seasonally adjusted counterparts in the same table and on page S-2 have been revised for the entire year 1966.

Annual Supplement to the Canadian Statistical Review:

The sixth issue of the above Supplement (1966 edition) will be completed shortly and will carry the latest revised figures and the complete historical record of all series appearing in the S- pages of the monthly Review.

Other Material:

There is still available a limited number of reprints on the following feature articles:

- (1) Recent Developments in the Work of the Dominion Bureau of Statistics—February 1967 issue.
- (2) Canadian Manpower Statistics—March 1967 issue.

The above copies are available on request, free of charge, from the Current Business Indicators and Data Bank, Economic Accounts Branch, DBS.

Annual Subscription: \$5.00 — Single copy: 50c.

This review and other publications of the Dominion Bureau of Statistics, including a free annotated catalogue of current publications, may be ordered from the Information and Public Relations Division, Dominion Bureau of Statistics, Ottawa, Ontario, and remittances made payable to the Receiver General of Canada.

2400-501

Historical Background

The recent upsurge of interest in expenditure surveys for welfare purposes and research into poverty is reminiscent of the origin of modern family living studies in the first half of the nineteenth century. Surveys of poverty carried out in European countries by Frederic Le Play during the period 1829 to 1879 were in the nature of case studies of workers' families selected as typical of large groups of workers. The information collected in Le Play's investigations and also by Quételet in the first statistical survey of family expenditures in 1853, provided a basis for the formulation of the famous consumption laws of the Prussian statistician, Ernest Engel. An American contemporary of Engel, Carroll D. Wright, tested Engel's laws on this continent in 1875, in a Massachusetts expenditure survey. He found that this survey, in common with subsequent surveys in the United States and also in Canada, confirmed two of Engel's propositions, that as income rises the proportion of buying power devoted to food declines, and that the proportion devoted to consumption categories other than food, shelter, and clothing increases.

In England, investigations into working-class living conditions were initiated by Charles Booth in 1886 and published in seventeen volumes in 1902. Early in this century improvements in method were introduced with the use of interviewing in 1901 and the introduction of sampling in 1912 by A.L. Bowley. By 1905, when Faith Williams and Carle Zimmerman issued their "Studies of Family Living in the United States and Other Countries", no less than 1,500 family living studies were on record.

The period of rapid price change in and after World War I aroused interest in the measurement of the impact of price change and the use of expenditure statistics in the construction of consumer price indexes. In 1925 the Second International Conference of Labour Statisticians recommended family living studies as the most satisfactory method of determining the weights for consumer price indexes. Along with the development of specialized uses of expenditure data, for price indexes, studies of food consumption and nutrition, minimum and standard budgets, increasing attention was given during the thirties to scientific methods of sample selection and interviewing. The great change in consumption habits after World War II resulted in an increased demand for expenditure statistics for a variety of uses related to comparisons in consumption levels between time periods and from place to place. Uses of the data for consumer demand analysis and market research reflected the great increase in the margin of resources available for consumption other than necessities. In the light of these changes, it is interesting to note that in recent years the word "poverty" has again become significant in demands for expenditure statistics to assist in re-defining the basic necessities for human well-being.

Expenditure Surveys in Canada

In Canada, family expenditure surveys have been predominantly urban. Information on farm family living expenses was collected in two separate surveys, first in 1934 when schedules were obtained from 2,700 crop correspondents, and again in 1958 as part of a comprehensive survey of farm income and expenditure. The first scientifically-planned expenditure survey, carried out in 1948, referred to wage-earner families in twelve Canadian cities. This was followed in 1948-49 by a national survey of expenditure and income which had reference to the total civilian, non-institutional population. Although the sample was national in scope, the survey did not yield adequate data for farm families, and results were published only for the non-farm population. While this survey was in progress, plans were being made for the collection of data on family budgets by means of small-scale continuing surveys which would serve the purpose of providing up-to-date information on expenditure patterns, and at the same time build up experience and skills in expenditure surveys. A small staff was established which would be concerned solely with the development of expenditure surveys and the various aspects of survey planning, processing and analysis. A parallel development at this time was the establishment of a section to develop sample surveys of family income, assets and indebtedness. It was recognized that although income and financial change were essential parts of expenditure surveys, the collection of reliable financial statistics could be more efficiently pursued in separate surveys. The location of the section on family expenditure surveys in the Prices Division was an indication of the strong orientation of the surveys to the needs of the Consumer Price index.

Results from the nation-wide survey of 1948 had been used to develop a post-war weighting pattern for the Consumer Price Index. Beginning in 1953, a series of biennial survey programmes was initiated with the primary purpose of utilizing data from relatively small samples in major cities to observe expenditure patterns of the population group which had been selected from the 1948 survey results as the "target group" of the Consumer Price index. From 1953 to the present, six survey programmes have been carried out, four of which have been restricted in order to sample only the target group of middle-income families in the size range two to six persons in urban centres with populations of 30,000 and over. The four specialized surveys in 1953, 1955, 1957 and 1962 each had a dual programme, consisting of surveys of family food expenditure throughout the year, in which a different sample of families kept records of food expenditure in each month, followed by an annual recall survey in which a new sample of families was interviewed concerning their expenditure and income over the previous year. This pattern, of record-keeping for food, and recall for other areas of the budget had also characterized the surveys of 1938 and 1948.

¹ Prepared in Prices Division by Miss I. McWhinney, Chief, Family Expenditure Surveys Section.

In the surveys of 1959 and 1964, no food surveys were conducted, but the sample reporting on the complete budget was doubled in size in order to sample more adequately all families and individuals in the cities covered by the survey. In each survey approximately 2,000 usable expenditure schedules were collected from a sample of 3,000 households.

About half of the records collected referred to the target group. These surveys thus served many needs not filled by the restricted surveys and also provided an opportunity to review the whole spectrum of expenditure patterns in larger urban areas in order to re-define the limits of the target group. The only difference in design between the surveys of 1959 and 1964 was that the 1959 survey sample was a new sample drawn from the Labour Force area sample frame to represent populations in all urban centres of 15,000 and over, whereas the 1964 sample referred to selected cities and was drawn from households previously interviewed in the monthly Labour Force Surveys.

Methodology of Expenditure Surveys

"Sir", said Dr. Johnson, "it is like a dog walking on its hind legs. It is not done well, but is surprising that it is done at all." Neither this reply nor the question which elicited it, had any reference to expenditure surveys. Nevertheless, the answer expresses aptly enough the feeling of those who attempt in an affluent society to collect exhaustive information on the money transactions of households. The two main alternatives, record-keeping and recall by interview, each present manifest difficulties.

Alfred Marshall summed up the survey-taker's dilemma when he said: "Workingmen's budgets have often been collected and compared. But like all other figures of the kind they suffer from the fact that those who will take the trouble to make such returns voluntarily are not average men, that those who keep careful accounts are not average men; and that when accounts have to be supplemented by the memory, the memory is apt to be biased by notions as to how the money ought to have been spent, especially when the accounts are put together for another's eye." In addition to the problem of persuading families to keep records even for short periods, there is an apparent conditioning effect which results in higher expenditures in the first week than in subsequent weeks, a phenomenon which has been observed in Canada as well as in many surveys in other countries. Recall surveys which collect by interview information for a past period are much more subject to inaccurate reporting than record-keeping because of the difficulty in remembering past purchases. Annual surveys may suffer either from under-reporting due to memory loss or from over-reporting due to faulty estimation or "telescoping". This latter type of error, the reporting of expenditures made outside the survey period, is one of the hazards of shorter recall periods. One way to cope with it which has been used

by the U.S. Bureau of the Census has been the use of a panel with "bounded" monthly or quarterly recall: in order to prevent the shifting of expenditures from one period to the next, the interviewer checks reporting in each survey against the record obtained in the previous period.

There are many possible variations of account-book or recall interview either separately or in combination. Canadian surveys in their dual programme of food surveys (record-keeping) and annual recall (interview) have accumulated experience in both methods. The large-scale surveys conducted by the United States Bureau of Labor Statistics have employed the recall technique exclusively, annual recall for the comprehensive budget, as in Canada, and one-week recall for food detail. In the United Kingdom, where surveys of family expenditure are continuous as well as continuing, records are kept of all family purchases for a two-week period, with additional information being collected by interview for certain income and expenditure items with a longer reference period. This method, of record-keeping supplemented by recall, is employed also in France and other European countries.

The method of annual recall followed in both the United States and Canada employs a very detailed questionnaire, designed to jog the memory by multiplicity of questions, and enumeration of items. Much depends on the skill and persistence of the interviewers. In Canada, they are chosen from experienced Labour Force enumerators who are given a special training in the expenditure questionnaire and the survey definitions. Nevertheless, because of the short period in which field operations for any one survey are carried out, the interviewers are still relatively inexperienced when the survey is over. In contrast, the United Kingdom surveys by their continuous nature, permit a longer training period and the development of a continuing staff whose major occupation is expenditure surveys.

An advantage of the recall survey is the balancing check between receipts and disbursements which is applied to individual records, not only as a part of field procedures, but in the final editing process. Results obtained in Canadian surveys show an encouraging degree of consistency, not only internally, but between surveys. Global estimates of total food expenditure have been generally consistent with annual estimates built up from detail obtained in the food diary surveys. The under-reporting of alcoholic beverages and tobacco which is observed in expenditure surveys generally appears to be a problem in record-keeping as well as recall, bearing witness to those peculiarities of human nature which tend to defeat even the most scientific investigator.

A feature of the recall survey, as conducted in Canada and the United States, is the necessity of re-constructing the spending unit over the survey year. Spending units which existed for only part of the year are not included in the tabulation of averages, although in a sample weighted to national aggregate levels, they would be included. The

expenditure survey would not include unattached individuals who had no income and therefore no existence as spending units in the survey year. This reconstruction principle constitutes a difference between expenditure surveys and the separate income surveys which count as income units all unattached individuals and families in the household at the date of the survey, but do not consider income of persons who left a family unit during the year. In part as a result of these differences, the proportion of one-person spending units in expenditure surveys is smaller than the proportion of unattached individuals in income surveys. Average income of one-person spending units tends to exceed the average income for unattached individuals obtained in income surveys, and the average income for all families and individuals is also higher than would be obtained in an income survey covering the same universe.

Patterns of Family Expenditure in 1964

Some results from the most recent survey of family expenditure, referring to eleven urban centres in 1964 are presented in the accompanying tables which 'summarize' survey detail in broad expenditure categories for families classified by city, family type, family income, age of head and tenure. In addition, averages and percentages defining family characteristics are shown for each class. With the exception of Table 2, which classified families of two or more by city, all tables refer to the complete sample of families.

It is not intended to deal exhaustively with the content of these tables in this article. They are presented as self-contained abstracts of information from the survey and should stand by themselves, along with the accompanying notes and definitions.

Like its predecessors, this survey gives a respectful nod to both Engel and Wright, verifying the two consumption laws of Engel which Wright confirmed in 1875, and agreeing with Wright's qualifications concerning the behaviour of shelter and clothing which Engel had found to maintain unvarying proportions with rising income. For the cross-section of families by income class in Table 4, shelter showed a pattern similar to that of food, which declined from 29 per cent of total expenditure in the lowest income group to 16.5 per cent in the highest income class. The percentage taken by shelter decreased from 30 per cent in the lowest income group to 13 per cent in the group with incomes of \$10,000 and over. The proportion taken by clothing, however, rose moderately with income, from 6.7 per cent in the lowest group to 9.3 per cent in the highest. For food, shelter and clothing combined, the proportion, averaging 46 per cent over the whole sample, decreased, from 66 per cent for families with incomes under \$2,500, to 39 per cent for families with incomes over \$10,000.

Current consumption expenses as a group declined in relation to total expenditure as income rose, because of the increasing proportions taken

by personal taxes, security payments such as insurance, and gifts. At the lower end of the income scale, 92 per cent of expenditure went for current consumption, in contrast to 75 per cent at the upper level. The margin of current consumption over and above food, shelter and clothing increased in proportion to total expenditure from 27 per cent to 36 per cent between the two income extremes. The major part of this increase was taken by transportation which advanced in importance from less than 5 per cent of expenditure in the lowest income group to 14 per cent in the two income groups between \$7,000 and \$10,000, declining again in the group over \$10,000.

The use of food, shelter and clothing to indicate the importance of "basic necessities" in the budget is no longer strictly valid because of the intermixture of luxuries and necessities in these groups as well as in other areas of the budget. The modern suburban shopper possibly regards the family car as a more absolute necessity than many of the food purchases she transports in it. However, it is still a useful comparison, if it is kept in mind that the 66 per cent devoted to these groups by families with incomes under \$2,500 represents more hard-core necessity than the 39 per cent at the highest income level.

Another type of information appearing in the tables among the family characteristics provides an indication of the extent of saving or dissaving by survey families over the survey year. Over the whole sample of families and individuals the net change in assets and liabilities was positive, averaging \$258. However in Table 4, it can be seen that it was predominantly negative, indicating dissaving, for income groups below \$6,000. The relatively small amounts indicate that there was probably a considerable balancing of increases and decreases within any one group. In Tables 1 and 2 it will be seen that for the majority of cities it was positive, and for those cities which registered a net dissaving the amount was small. Among family type groups, the net change was negative for families consisting of two adults and three or more children, and the largest positive changes were among all-adult or predominantly adult families. For families classified by age of head, only the under 25 group registered a negative change. In the tenure classification, owners and mixed-tenure families averaged net changes which were positive, with larger changes being registered for mortgage-free owners, while regular tenants averaged net negative changes.

It should be noted that the average account-balancing differences in the survey were smaller than those which might be obtained by balancing expenditure plus positive net financial change against income plus negative financial change, because of the presence of other money receipts which are not counted as income. Taking into account other money receipts, disbursements exceeded receipts over the whole survey by \$82 or

1.3 per cent of average income. By city these differences ranged in amount from \$15 to \$167, or from less than 1 per cent to 3 per cent of income. By income group, the largest net discrepancies were recorded in the groups between \$4,500 and \$7,000, ranging from 2 per cent to 6 per cent in the \$4,500-4,999 income class. By family type, groups of families with two adults and children had net differences indicating an excess of reported disbursements of from 2 to 5 per cent. By age of head the largest discrepancies were in the age groups from 25 to 44, with an excess of disbursements of around 2 per cent. In the upper age groups over 55, differences were small and tended to be positive,

indicating that net receipts were greater. In the tenure classification, the most outstanding discrepancy was registered in the mixed tenure group, consisting of families which had changed their tenure during the survey year; on average, disbursements exceeded receipts by \$514, almost 7 per cent of average income for the group. This group tended to have rather more complex transactions during the year, and frequently it was difficult for the enumerator to obtain a clear record.

These differences, which are not shown in the tables presented here, will be published in detail in the final report on this survey.

NOTES AND DEFINITIONS

Family. — The family or spending unit is defined as a group of persons dependent on a common or pooled income for the major items of expense and living in the same dwelling. Never-married sons or daughters living with their parents are considered as part of their parents' spending unit. In the great majority of cases the members of spending units of two or more are related by blood, marriage or adoption, and are thus consistent with the "economic family" definition employed in surveys of family income, "a group of individuals sharing a common dwelling unit and related by blood, marriage or adoption". Individual or one-person spending units are financially independent persons living alone or as roomers.

Family head. — In husband-wife families, the husband was considered as head. In one-parent families with unmarried sons or daughters, the parent was considered head. In all other types of spending units, the head was the person mainly responsible for the maintenance of the spending unit.

Age of family members. — Age at December 31, 1964, in other words the age attained at the 1964 birthday.

Adult. — Person 16 years of age or over at December 31, 1964.

Child. — Person under 16 years at December 31, 1964.

Family type. — Defines the family in terms of numbers of adults and children listed as family members during the survey year.

Earners. — Any person 14 years of age or over who earned more than \$250 in the survey year.

Employment status of wife. — Refers only to number of weeks worked within the survey year including holidays with pay. No distinction was made between full-day and part-day employment. Full-time employment refers to employment of 48 weeks or more.

Home-owner. — Refers to families living in a dwelling (either with or without mortgage) owned for the entire survey year by a member of the spending unit.

Car owner. — Refers to families owning a car at December 31, 1964.

City. — Refers in each case to the metropolitan area or urban area comprising city proper and fringe areas.

Family size. — Family size or "year-equivalent persons" was computed by dividing the total number of weeks during which family members belonged

to the unit in the survey year by 52 weeks. In this way, part-year members were counted as fractions of a year-equivalent person.

Weighted percentage of families. — Survey results were adjusted by city weight factors, designed to give each city the relative importance of its population. In some cities different weights were assigned to individuals to compensate for lower response rates for this group.

Money income. — Included: (1) Employment income, i.e., gross income from wages and salaries; net income before taxes from self employment; and receipts from military pay and allowances. (2) Other income, i.e., gross receipts from roomers and boarders; net rentals; family allowances; interest and dividends; all pensions; workmen's compensation and unemployment insurance benefits; regular receipts from insurance policies and annuities; and miscellaneous regular income receipts.

Other money receipts. — Reported but not included in income, comprised inheritances; bequests; lump sum settlements from property insurance, accident and health policies; and irregular gifts from outside the family.

Net change in assets and liabilities. — Referred to net changes during the survey year in assets such as bank accounts, money on hand, investments in business, stocks and bonds (excluding change in market value), loans made to others, and the sale of real estate and personal possessions along with net changes during the survey year in liabilities such as mortgages, notes due to banks, loans and insurance companies, etc., installment purchases, charge accounts and other bills, rents and taxes. If on balance a family dissaved, i.e., if credits (net increase in assets and net decrease in liabilities) were exceeded by debits (net increase in liabilities and net decrease in assets) then, this would result in a negative figure (-). There was no allowance for depreciation in any of these asset changes.

Expenditures for current consumption. — Included expenses incurred during the survey year for food, housing, fuel, light and water; household operation; clothing; automobile purchase and operation; other transportation; medical care; personal care; recreation; reading; education; smoking and alcoholic drinks and a miscellaneous group. Consumer durables such as automobiles and household equipment were considered as consumption items, but changes in equity, purchases and sales of homes were considered as changes in assets and liabilities. Family expenditures for items used partially for business, such as home or cars were adjusted to exclude the amount chargeable to business use. Sales, excise, automobile and real estate taxes were included as part of consumption expenditure for the commodity or service to which these taxes applied.

¹ Regular tenants and roomers together account for 50.2 per cent.

LABOUR FORCE (More detail in Table 19)

Employment and total labour force declined in April, thus reversing the upward trend prevailing in the previous four months. The unemployment rate remained unchanged at 3.9 per cent.

		total labour force	total employed	employed non-agriculture	unemployed	unemployment rate	not in the labour force
		thousands				per cent	thousands

INDUSTRIAL PRODUCTION (More detail in Table 16)

The index of industrial production edged slightly downward in March with the decline being concentrated in electric power and gas utilities as manufacturing was virtually unchanged while mining rose.

		total industrial production (1949=100)	manufacturing (1949=100)			(1949=100)

EMPLOYMENT, SELECTED INDUSTRIES (More detail in Table 28)

Employment showed little change in February. Decreases were recorded in trade, manufacturing and mining, while the other industry divisions showed increases except construction where there was no change.

CONSTRUCTION (More detail in Tables 67, 72 and 73)

Value of building permits dropped noticeably in March in both the residential and non-residential sectors with the decline in the latter being more pronounced.

Housing starts picked up in April for the second consecutive month with completions recovering following the irregular low point registered in the previous month.

	value of building permits			new dwelling construction, centres 10,000 and over		
	total	non-residential	residential	starts, total	completions, total	under construction

SELECTED MONTHLY SERIES (More detail in Tables 45, 90, 98 and 108)

Manufacturing inventories, shipments and orders moved slightly down in March.
 Rail revenue freight loaded declined by 2 per cent in April.
 Value of cheques cashed in clearing centres dropped in March for the second consecutive month.
 Consumer credit expansion continued in February.

PRICES (More detail in Tables 37, 38, 39, 93, 94 and 114)

The general wholesale price index remained stable in April.

The index of industrial common stocks experienced a sixth straight month of increase in April.

The consumer price index jumped by 0.9 per cent in April as all index components rose, with sales tax increases in Quebec and Newfoundland contributing to the rise.

¹The occupational status of the majority of the persons destined to the labour force is determined by immigration officials by an examination of documentary evidence provided by the immigrants. The classification of occupations is similar to that used in the 1961 Census; see Occupational Classification Manual, Census of Canada, 1961, Catalogue Number 12-506. ²Includes logging, fishing, trapping and hunting. ³Includes mechanical and construction. ⁴Includes a small number in non-specified occupations. ⁵Does not include students entering Canada on students' visas. ⁶Includes also retired persons, elderly dependents, fiancés or fiancées and other unspecified persons not intending to enter the labour force.

¹Figures for births, marriages and deaths for 1966 and 1967 are provisional and represent registrations filed in provincial vital statistics offices during the month under review, regardless of the month of occurrence. Figures for these years are exclusive of the Yukon and the Northwest Territories. Births and deaths are also exclusive of stillbirths. Sources: Vital Statistics (84-001), D. B. S.

Table 7: national income and gross national product (million dollars)

years and quarters	salaries, wages and supplementary labour income	military pay and allowances	corporation profits before taxes	deduct: dividends paid to non-residents	rent, interest and miscellaneous investment income	accrued net income of farm operators from farm production ¹	net income of non-farm unincorporated business	inventory valuation adjustment	net national income at factor cost	indirect taxes less subsidies	capital consumption allowances and miscellaneous valuation adjustments	gross national product at market prices ²

¹Includes change in farm inventories. The seasonally adjusted data include an arbitrary smoothing of crop production, standard seasonal adjustments for withdrawals of grain from farm stocks and the change in livestock items. Because of arbitrary elements, too precise an interpretation should not be given to the series. ²Includes residual error of estimate. Source at bottom of Table 12.

¹Excludes inmates of institutions, members of the armed services, Indians living on reserves and residents of the Yukon and Northwest Territories. The estimates are derived from a sample survey and are subject to sampling error. In general, the smaller the estimate, the larger is the relative sampling error. ²The labour force as a percentage of the population 14 years of age and over. ³The unemployed as a percentage of the labour force. ¹See footnote 1, table 19. Labour force obtained as the sum of employed and unemployed from tables 21 and 23. ²Canada totals, obtained by summing the seasonally adjusted data for the five regions, are usually different from the totals given on page S-1. These differences are small and are due to a statistical discrepancy. Source: The Labour Force, (71-001) D.B.S.

¹In calculating time loss, only the workers directly affected by the strike or lockout are taken into account; time lost by workers indirectly affected, such as those laid off as a result of a work stoppage is not included. ²The statistics for individual industries exclude strikes and lockouts involving fewer than 100 workers; the total, however, includes all work stoppages. ³The agricultural, finance, insurance and real estate and public administration and defence industries are not shown separately; should strikes occur in these industries, they also will be shown in the total. ⁴Includes miscellaneous manufacturing industries. ⁵Includes also publishing and allied industries. ⁶Includes also the storage and communication industries.

Source: Labour Gazette, Department of Labour.

¹The data in Tables 28 to 35 are based on reports from firms employing 20 persons or more in any month of the year and relate to the last pay periods in the month. Greater industrial and area detail and more explanatory notes are given in the source publication named below. ²Excludes agriculture, fishing, trapping and public administration and defence. ³Includes storage, electric power, gas and water utilities. ⁴Excludes domestic service. ¹Monthly shipments represent an estimated projection of the latest available census of manufacturer's values except for those industries whose long term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been estimated. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

Table 41: manufacturing inventories¹ by industries as in the revised standard industrial classification (million dollars)

¹Monthly shipments represent an estimated projection of the latest available Census of Manufacturers values except for those industries whose long-term contracts result in large intermittent shipments; for these a monthly estimate of work put in place has been substituted. ²Total manufacturing inventory owned by manufacturers including warehouse stocks. ³Total new orders received during the period at estimated selling value, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month. ⁴End of period. Annual figures for inventories and unfilled orders are end of December values. Source: Inventories, Shipments and Orders in Manufacturing Industries (31-001), D. B. S.

¹Total pulp production covers "screenings" which are already included in exports. "Screenings" are excluded throughout from mechanical and chemical pulp.

²100 cu. ft. of solid wood; pulpwood produced for domestic use and excluding exports. ³Customs exports. ⁴Mill shipments destined for export.

¹Data on shipments relate to rolling mills products only. Shipments to consuming industries of castings, forgings and steel pipe are not included. ²Includes building contractors, public and utility construction, structural steel fabricators, national defence and public works and utilities. ³Includes appliances and utensils. Note: Some groupings are not entirely comparable to year 1964 due to change in classifications but in general the differences are minimal. ⁴Excluding shipments for re-processing at maker's own plant. Source: Primary Iron and Steel (41-001), D. B. S.

Note: Components may not add to totals due to rounding. Current figures in this table are preliminary and therefore subject to revision. ¹Includes crude oil, condensate and pentanes plus. ²Deliveries to refineries and exports do not add to total new supply due to losses, other uses and inventory changes. ³Gross new production by field and processing plants less field flared and waste, Canadian sources only. ⁴By gas utilities, Canadian sources only. Sources: Crude Petroleum and Natural Gas Production (26-006) and Gas Utilities (55-002), D. B. S.

¹Barrels of 35 Canadian gallons. ²Includes domestic and imported crude oil, condensate and pentanes plus received by Canadian refineries. ³Refinery production (from crude oil, condensate and pentanes plus, and commingled propane/butane mixes) plus other materials used. ⁴Includes deliveries of butane commingled in the crude stream in Saskatchewan and Alberta. ⁵Includes inventories at end of period being held at gas plants and in storage caverns. ⁶Includes stove oil, kerosene and tractor fuel. ⁷Includes aviation gasoline and aviation turbo fuel. ⁸Due to conceptual changes, the stock and sales series are not available on a comparable basis prior to June 1965. Includes propane and propane mixes and butane and butane mixes. ⁹Includes petro-chemical feed stocks, naphtha specialties, coke, lubricating oil and grease, still gas and other products. Source: Refined Petroleum Products (45-004), D. B. S.

Note: Components may not add to totals due to rounding differences. ¹The data are collected for 1,400 municipalities and individual figures are available on request. ²Historical data back to 1920 are available in "Historical Monthly Statistics" Catalogue No. 11-503, occasional. Starting with January 1966, the number of municipalities has been reduced to 56 following the annexation of the town of Riverside to the city of Windsor. Source: Building Permits (64-001), D.B.S.

¹The coverage was extended to 507 municipalities in 1948, and as of 1965, stands at more than 1,400; minor revisions are still being required in the table, due to the non-receipt of returns from a few small places. No account is taken of the building activity outside of registration areas. Actual operations normally follow the granting of permits but a number of projects are not undertaken or abandoned. The amount depends upon the statement of the applicant and considerable change may develop before the completion of the operation. Source: Building Permits (64-001), D.B.S.

¹A dwelling unit is defined as a structurally separate set of living quarters having its own entrance from outside of the building, or from a common passage inside. These data are the result of a nation-wide survey, for which the field work is carried out by the Central Mortgage and Housing Corporation. All metropolitan areas and urban centres with a population of 10,000 or more, along with certain other areas of high building activity, are enumerated completely each month. The remainder of the country is covered on a sample basis quarterly. ²End of period. Source: New Residential Construction (64-002), D. B. S.

Note: Components may not add to totals due to rounding. ¹The estimates for the current year are subject to revision since the factors used in the blow-up are based on the previous years' operations and may change when the current annual totals for all firms are known the following year. ²Excluding trucks. ³The total value of all machines shown in this table is greater than the value shown for farm machinery in Table 87 which covers wholesalers proper only. The above table covers all sales to users and includes sales by manufacturers through their agents as well as the sales of importers and other dealers made directly to users. Even though sales are to users, i.e. farmers, values are stated at wholesale prices, i.e. cost to dealers. Source: Farm Implement and Equipment Sales (63-009), D. B. S.

¹These indexes are available for January, April and August only. ²Average rates of cash wages paid per month to male hired help on farms. They reflect the average of the wages paid to all male farm help regardless of age and skill. Data are available for January, May and August only. ³Exclusive of Newfoundland. Western grain prices used in the construction of the Index prior to August 1, 1965 are final prices. From August 1, 1965 to date, the western grain prices used in the Index are initial prices only for wheat, oats and barley. ⁴Barley No. 1 feed; hogs grade "B" alive. ⁵Price of 100 lbs. good steer as a percentage of the price of 100 lbs. live hog, grade B. ⁶Price of 100 lbs. good steer as a percentage of the price of 100 lbs. good lamb. ⁷Quotations refer to steers of all weights. ⁸Grade "B1" hogs. Sources: Price Index Numbers of Commodities and Services Used by Farmers (62-004); Farm Wages in Canada (21-002) Occasional; Coarse Grains Quarterly (22-001), D.B.S. and Livestock and Meat Trade Report, Dept. of Agriculture.

¹Customs exports are adjusted to reflect actual physical movement of wheat flour from Canada.

Data shown for the last three months are not so adjusted.

²Includes stocks held by manufacturers, wholesalers and other warehouses.³Many mills were operating at more than the standard 26 working days in the month.⁴Includes solid, coated, bulk, packages and novelties.⁵Includes beef stews and boiled dinners.⁶Includes tomato sauce, sauces for meat and fish and sauces, other.

¹Total retail trade obtained by summing "By Kinds of Business". The sum of the seasonally adjusted retail trade by regions will not necessarily add up to this total. ²Includes sales of new and used cars, trucks and buses, repair parts and services, tires and tubes, storage batteries, gasoline, some farm implements and a small amount of wholesale trade.

¹Monthly averages for 1964 and 1965 may differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Data in this table refer to class 1 and class 2 carriers which are railways with gross annual operating revenues of \$500,000 or over. Includes operations of United States railways operating in Canada but excludes operations of Canadian railways in the United States. ³Includes traffic interchanged between Canadian railways. Sources: Railway Operating Statistics (52-003) monthly, and (52-206) annual, D. B. S.

¹Includes Class I and Class II carriers only. These are trucking firms having \$100,000 or more gross annual operating revenues. ²Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from inter-city and rural bus operations. Regular and chartered services are included. Revised figures to December 1963 only. ³Includes Class I carriers only. These are carriers having \$100,000 or more gross annual revenues primarily from urban transit operations. Data are totals for motor bus, trolley coach, street car, subway and chartered services. Revised figures to December 1963 only. Sources: Motor Carriers-Freight, Quarterly (53-005), Passenger Bus Statistics (53-002) monthly, and Urban Transit (53-003) monthly, D. B. S.

¹Monthly averages for years 1964 and 1965 differ from the averages of the monthly data due to revisions which cannot be allocated by months. ²Includes scheduled and non-scheduled carriers, groups I to IV. These groups cover all air carriers with gross operating revenues of over \$60,000 annually prior to January, 1964 and over \$100,000 annually since. ³United States and other foreign carriers. Excludes in transit passengers. ⁴Cargo includes air freight and express but excludes mail and excess baggage. ⁵Data prior to 1964 do not include bulk transportation. Because of survey limitations, data after January 1, 1964 refer only to aircraft having a minimum authorized take-off weight on wheels in excess of 18,000 lbs. Source: Civil Aviation (51-001), D. B. S.

¹The statistics of failures in this table are limited to those bankruptcies filed under Federal legislation (the Bankruptcy and Winding-Up Acts) and does not include failures, sales or seizures carried out under other legislation. The figures for Atlantic provinces may be obtained by subtracting the sum of Quebec, Ontario, Prairie provinces and British Columbia from the total. ²In the Bankruptcy Act of 1949, provision is made for proposals from insolvent persons. Agreements made under this method are not included with the statistics of bankruptcies. Liabilities of insolvent persons making proposals are not available. ¹Excluding revivals, increases, dividend additions, reinsurance acquired, credit insurance and pension bonds without insurance. Value totals are estimates projected from the sales reported by 34 companies operating in Canada representing 82% of new ordinary and 83% of new group contracts. ²The monthly Canada totals for 1964 do not correspond to the sum of the provincial totals as revisions applied to the national total are not yet available for the provinces. Neither the monthly figures for 1964 nor the monthly averages for 1964 have been revised to agree with the Canada total. ³Total new settled-for ordinary sales in Canada. ⁴Under new or amended contracts.

¹The definition of profits before taxes is based mainly on the accounting definition used by corporations. However, depletion charges are added back to net profits while Canadian dividends received are excluded from profits in order to avoid duplication. The term "profits" as used here means the total profits of all companies earning profits less the losses of all companies incurring losses. Estimates are based on profits as reported by sample of all companies incorporated in Canada (excluding government-owned companies). ²As is evident from the above footnote, the data reporting unit is the company; the data are therefore not entirely comparable with data where the establishment is the reporting unit. ³Includes also the furniture and furnishings industry. ⁴Includes the primary metal, the metal fabricating, the machinery and the transportation equipment industries. ⁵Includes tobacco products, leather and miscellaneous manufacturing industries. ⁶Includes also storage and communication industries. ⁷Includes agriculture, forestry, fishing and construction. Source: Corporation Profits (61-003), D. B. S.

Table 114: index numbers of security prices¹ (1956=100), based on the revised standard industrial classification²

Note: Some of the current statistics in this table are not entirely comparable to the corresponding figures of previous years due to transfers of duties which took place during the current year and which have not been adjusted.

¹This statement does not include any disbursements other than regular budgetary expenditures. Excluded, for example, are all government outlays arising from increases in loans, advances and investments.

²Expenditures for administration applicable to the Treasury Board have not been transferred from Finance.

³Under the Technical and Vocational Training Assistance Act. ⁴Government contributions under the Hospital Insurance and Diagnostic Services Act. ⁵Includes treatment and rehabilitation services.
